DIN 4150-3:2016-12 (E)

Vibrations in buildings - Part 3: Effects on structures

Contents

Page

Foreword 3

1 Scope 4

2 Normative references 4

3 Terms and definitions 4

4 Principles of determining and evaluating the effects of structural vibration 5
4.1 Suitable methods 5
4.2 Vibration measurements 5
4.3 Determination of stresses 5
4.4 Resistance capacity 6
4.5 Evaluation standards 6
4.6 Effects of vibration on soil 7

5 Short-term vibration 7
5.1 Evaluation of structures 7
5.2 Evaluation of massive structural components and underground structures 9
5.3 Evaluation of buried pipework 10

6 Long-term vibration 10
6.1 Evaluation of structures 10
6.2 Evaluation of buried pipework 12
6.3 Start up and shut down operations 12

7 Performing vibration measurement 12

Annex A (normative) Sample measurement report 14

Annex B (normative) Alternative measuring and evaluation method 16

Annex C (normative) Effects of vibration on soil 17

Annex D (informative) Measurements and evaluations 18

D.1 Information on measurements on pipework 18
D.2 Frequency determination 18

Annex E (informative) Minimizing the effects of vibration 21

E.1 Measures that can be taken at the vibration source 21
E.2 Measures taken at the structure affected by vibration 22
E.3 Measures taken along the transmission path 22
