| <b>European foreword</b>                                     | <b>4</b>  |
| <b>European foreword to Amendment 1</b>                      | <b>8</b>  |
| <b>1 General</b>   | <b>9</b>  |
| 1.1 Scope  | 9         |
| 1.2 Normative references                                     | 9         |
| 1.3 Assumptions  | 10        |
| 1.4 Distinction between principles and application rules     | 10        |
| 1.5 Terms and definitions                                    | 10        |
| 1.6 Symbols used in Part 4.1 of Eurocode 3                   | 13        |
| 1.7 Sign conventions   | 15        |
| 1.8 Units  | 20        |
| <b>2 Basis of design</b>                                     | <b>21</b> |
| 2.1 Requirements   | 21        |
| 2.2 Reliability differentiation                              | 21        |
| 2.3 Limit states   | 22        |
| 2.4 Actions and environmental effects                        | 23        |
| 2.5 Material properties                                      | 23        |
| 2.6 Geometrical data   | 23        |
| 2.7 Modelling of the silo for determining action effects     | 23        |
| 2.8 Design assisted by testing                               | 23        |
| 2.9 Action effects for limit state verifications             | 24        |
| 2.10 Durability  | 25        |
| 2.11 Fire resistance   | 25        |
| <b>3 Properties of materials</b>                             | <b>26</b> |
| 3.1 General  | 26        |
| 3.2 Structural steels  | 26        |
| 3.3 Stainless steels   | 26        |
| 3.4 Special alloy steels                                     | 26        |
| 3.5 Toughness requirements                                   | 27        |
| <b>4 Basis for structural analysis</b>                       | <b>28</b> |
| 4.1 Ultimate limit states                                    | 28        |
| 4.2 Analysis of the structure of a shell silo                | 29        |
| 4.3 Analysis of the box structure of a rectangular silo      | 32        |
| 4.4 Equivalent orthotropic properties of corrugated sheeting | 33        |
| <b>5 Design of cylindrical walls</b>                         | <b>36</b> |
| 5.1 Basis  | 36        |
| 5.2 Distinctions between cylindrical shell forms             | 36        |
| 5.3 Resistance of silo cylindrical walls                     | 37        |
| 5.4 Special support conditions for cylindrical walls         | 64        |
| 5.5 Detailing for openings in cylindrical walls              | 69        |
| 5.6 Serviceability limit states                              | 70        |

|          |  |            |
|----------|--|------------|
| <b>6</b> | <b>Design of conical hoppers</b>                                     | <b>71</b>  |
| 6.1      | Basis  | 71         |
| 6.2      | Distinctions between hopper shell forms                              | 71         |
| 6.3      | Resistance of conical hoppers  | 72         |
| 6.4      | Considerations for special hopper structures                         | 77         |
| 6.5      | Serviceability limit states  | 79         |
| <b>7</b> | <b>Design of circular conical roof structures</b>                    | <b>80</b>  |
| 7.1      | Basis  | 80         |
| 7.2      | Distinctions between roof structural forms                           | 80         |
| 7.3      | Resistance of circular conical silo roofs                            | 80         |
| <b>8</b> | <b>Design of transition junctions and supporting ring girders</b>    | <b>82</b>  |
| 8.1      | Basis  | 82         |
| 8.2      | Analysis of the junction   | 80         |
| 8.3      | Structural resistances   | 92         |
| 8.4      | Limit state verifications  | 96         |
| 8.5      | Considerations concerning support arrangements for the junction      | 98         |
| <b>9</b> | <b>Design of rectangular and planar-sided silos</b>                  | <b>100</b> |
| 9.1      | Basis  | 100        |
| 9.2      | Classification of structural forms                                   | 100        |
| 9.3      | Resistance of unstiffened vertical walls                             | 101        |
| 9.4      | Resistance of silo walls composed of stiffened and corrugated plates | 101        |
| 9.5      | Silos with internal ties   | 100        |
| 9.6      | Strength of pyramidal hoppers  | 106        |
| 9.7      | Vertical stiffeners on box walls                                     | 108        |
| 9.8      | Serviceability limit states  | 108        |
|          | <b>Annex A: [Informative]</b>  | <b>110</b> |
|          | <b>Simplified rules for circular silos in Consequence Class 1</b>    | <b>110</b> |
|          | A.1 Action combinations for Consequence Class 1                      | 110        |
|          | A.2 Action effect assessment   | 110        |
|          | A.3 Ultimate limit state assessment                                  | 110        |
|          | <b>Annex B: [Informative]</b>  | <b>117</b> |
|          | <b>Expressions for membrane stresses in conical hoppers</b>          | <b>117</b> |
|          | <b>Annex C: [Informative]</b>  | <b>119</b> |
|          | <b>Distribution of wind pressure around circular silo structures</b> | <b>119</b> |
