## Fire safety engineering - Performance of structure in fire - Part 2: Example of an airport terminal

---

<b>Contents</b>		<b>Page</b>
Foreword .....		iv
Introduction .....		v
1	Scope .....	1
2	Normative references .....	1
3	Terms, definitions and symbols .....	1
4	Design strategy for fire safety of structures .....	3
5	Quantification of the performance of structures in fire .....	3
5.1	Step 1: Scope of the project for fire safety of structures .....	3
5.1.1	Built environment characteristics .....	3
5.1.2	Fuel loads .....	4
5.1.3	Mechanical actions .....	5
5.2	Step 2: Identify objectives, functional requirements and performance criteria for fire safety of structures .....	6
5.3	Step 3: Trial design plan for fire safety of structures .....	7
5.4	Step 4: Design fire scenarios and design fires .....	9
5.4.1	Design fire scenarios .....	10
5.4.2	Design fires (thermal actions) .....	11
5.5	Step 5: Thermal response of the structure .....	17
5.5.1	Smoke temperature from FDS simulation .....	17
5.5.2	Calculating steel temperature exposed to smoke .....	19
5.6	Step 6: Mechanical response of the structure .....	20
5.6.1	Deformation analysis of the structure .....	21
5.6.2	Strength analysis of the main span under fire exposure .....	22
5.7	Step 7: Assessment against the fire safety objectives .....	26
5.8	Step 8: Documentation of the design for fire safety of structures .....	27
5.9	Factors and influences to be considered in the quantification process .....	28
5.9.1	Material properties .....	28
5.9.2	Effect of continuity and restraint (interaction between elements and materials) .....	30
5.9.3	Use of test results .....	30
5.9.4	Fire spread routes .....	30
6	Guidance on use of engineering methods .....	31
Annex A (informative)	Views and plans of the airport terminal .....	32
Bibliography .....		34
