ISO/TR 24679-6:2017-12 (E)

Fire safety engineering - Performance of structures in fire - Part 6: Example of an eight-storey office concrete building

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms, definitions and symbols 1
3.1 Terms and definitions 1
3.2 Symbols 2

4 Design strategy for fire safety of structure 3
4.1 General design process for fire safety of structures 3
4.2 Guidance of practical design process for fire safety of structure 3

5 Qualification of the performance of structures in fire 3
5.1 STEP 1: Scope of the project for fire safety of structure 3
5.1.1 Built-environment characteristics 3
5.1.2 Fuel loads 6
5.1.3 Mechanical actions 7
5.2 STEP 2: Identifying objectives, functional requirements, and performance criteria for fire safety of structure 8
5.3 STEP 3: Trial plan for fire safety of structure 10
5.4 STEP 4: Design fire scenarios and design fires 10
5.4.1 General 10
5.4.2 Design fire scenarios 10
5.4.3 Design fires 11
5.5 STEP 5: Thermal response of the structure 17
5.5.1 General 17
5.5.2 Thermal analysis of the slab 18
5.5.3 Thermal analysis of the beam 19
5.5.4 Thermal analysis of the column 21
5.6 STEP 6: Mechanical response of the structure 21
5.6.1 Structural model 21
5.6.2 Assumptions of the analysis 22
5.6.3 Structural behaviour of the building 24
5.7 STEP 7: Assessment against the fire safety objectives 34
5.8 STEP 8: Documentation of the design for fire safety of structures 34
5.9 STEP 9: Factors and influences to be considered in the quantification process 35
5.9.1 Material properties 35

Annex A (informative) Heat transfer of calculation 39

Annex B (informative) Results from thermal and mechanical analyses 40

Annex C (informative) Results from OAT sensitivity analysis for the uncertainty of material properties 44

Bibliography 48
