Geotechnical investigation and testing - Laboratory testing of soil - Part 9: Consolidated triaxial compression tests on water saturated soils

Contents		Page
Foreword		v
Introduction		vi
1	Scope	1
2	Normative references	1
3	Terms and definitions	2
4	Symbols	3
5	Apparatus	5
5.1	General	5
5.2	Triaxial cell	7
5.3	Confining membrane	7
5.4	Porous discs	7
5.5	Filter paper	8
5.6	Pressure systems	8
5.7	Load frame	8
5.8	Measuring devices	8
5.8.1	Load measuring device	8
5.8.2	Pressure measuring devices	9
5.8.3	Vertical displacement measuring device	9
5.8.4	Volume change measuring device	9
5.9	Cell and back pressure fluids	9
5.10	Ancillary apparatus	9
6	Test procedure	10
6.1	General requirements and equipment preparation	10
6.2	Preparation of specimens	10
6.3	Saturation of specimen	11
6.3.1	Saturation	11
6.3.2	Application of cell and back pressure	12
6.3.3	Saturation checks	12
6.4	Isotropic consolidation (CIU and CID tests)	13
6.5	Anisotropic consolidation (CAU and CAD tests)	13
6.6	End of consolidation	13
6.7	Shearing	13
6.7.1	General	13
6.7.2	Undrained tests (CIU and CAU)	14
6.7.3	Drained tests (CID and CAD)	14
6.8	Dismounting	15
7	Test results	15
7.1	Bulk density, dry density and water content	15
7.2	Calculations of test parameters	16
7.2.1	Height after consolidation	16
7.2.2	Corrected cross sectional area	16
7.2.3	Corrections for elastic membrane	16
7.2.4	Correction for filter paper strips	17

7.2.5	Vertical total stress	17
7.2.6	Vertical effective stress	17
7.2.7	Horizontal total stress	18
7.2.8	Horizontal effective stress	18
7.2.9	Pore pressure change	18
7.2.10	Vertical strain	18
7.2.11	Vertical strain during shear	18
7.2.12	Volumetric strain	18
7.2.13	Volumetric strain during shear	18
8	Test report	19
8.1	Mandatory reporting	19
8.2	Graphical presentation	20
8.3	Optional reporting	20
Annex A (normative) Calibration, maintenance and checks		21
Annex B (informative) Additional calculations for effective shear strength		23
Bibliography		25
