ISO 21501-4:2018 (E)

Determination of particle size distribution — Single particle light interaction methods — Part 4: Light scattering airborne particle counter for clean spaces

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Principle

5 Basic configuration

6 Requirements

- 6.1 Size setting error
- 6.2 Counting efficiency
- 6.3 Size resolution
- 6.4 False count
- 6.5 Maximum particle number concentration
- 6.6 Sampling flow rate error
- 6.7 Sampling time error
- 6.8 Response rate
- 6.9 Calibration interval
- 6.10 Reporting of test and calibration results

7 Test and calibration procedures

- 7.1 Size setting
- 7.1.1 Evaluation of size setting error
- 7.1.2 Procedure of size setting
- 7.2 Evaluation of counting efficiency
- 7.3 Evaluation of size resolution
- 7.4 Evaluation of false count
- 7.5 Estimation of coincidence loss at the maximum particle number concentration
- 7.6 Evaluation of sampling flow rate error
- 7.7 Evaluation of sampling time error
- 7.8 Evaluation of response rate

Annex A (informative) Counting efficiency

Annex B (informative) Size resolution

Annex C (informative) False count

Annex D (informative) Response rate

Annex E (informative) Procedure for evaluating the uncertainties of the results of the performance tests

- E.1 Basics on measurement uncertainty
- E.2 Uncertainty of counting efficiency, η
- E.3 Uncertainty of the size setting error, ε
- E.4 Consideration of test uncertainties in the requirements for LSAPCs
