DIN EN 13031-1:2020-02 (E)

Greenhouses - Design and construction - Part 1: Commercial production greenhouses

Contents

Page

European foreword 5

Introduction 6

1 Scope 7

2 Normative references 7

3 Terms and definitions 8

4 Symbols and abbreviations 9

5 Basis of design for greenhouse structures 13
5.1 General 13
5.2 Classes of greenhouse structures 13
5.2.1 General 13
5.2.2 Tolerance to frame displacements of the cladding system 14
5.2.3 Design working life of the structure 14
5.3 Reliability of commercial production greenhouses 14
5.3.1 General classification, recommendations 14
5.3.2 Partial factors F 15
5.3.3 Combination coefficients 15
5.3.4 Basis for actions on greenhouses 16

6 Ultimate limit states 16
6.1 General 16
6.2 Design calculations 17
6.3 Testing 17

7 Serviceability limit states 17
7.1 General 17
7.2 Design calculations 17
7.3 Testing 17

8 Tolerances 17
8.1 General 17
8.2 Tolerances specific to Type A greenhouses 21
8.3 Tolerances specific to Type B greenhouses 23

9 Durability, maintenance and repair 24
9.1 General 24
9.2 Durability 24
9.3 Maintenance and repair 24

10 Actions on greenhouses 24
10.1 General 24
10.2 Representative values of actions 25
10.2.1 Permanent actions 25
10.2.2 Variable actions 25
10.2.3 Accidental actions 29
10.3 Combination of actions 29

11 Displacements and deflections (SLS) 31
11.1 Displacements of Class A greenhouses 31
11.1.1 Displacements of connecting points of columns with foundations 31
11.1.2 Displacements at gutter level 31
11.1.3 Displacements of arches 35
11.2 Deflections of Type A greenhouses 36
11.2.1 General 36
11.2.2 Deflections of components of a greenhouse 36

Annex A (normative) Structural capacity of glass panels 38

A.1 General 38
A.2 Calculation method for glass panels 38
A.3 Materials 41

Annex B (normative) Wind actions 44

B.1 General 44
B.2 Aerodynamic coefficients 44
B.2.1 General 44
B.2.2 Greenhouses with pitched roofs 45
B.2.3 Greenhouses with arched roofs 51
B.2.4 Internal pressures 62
B.2.5 Surface friction 63
B.2.6 Ventilators 63
B.2.7 Permeable cladding 63
B.3 Dynamic coefficients for gust wind response 64

Annex C (normative) Snow actions 65

C.1 General 65
C.2 Thermal coefficient Ct 67
C.2.1 Requirements for heated greenhouses with controlled heating 67
C.2.2 Special heat transmittance (Uo value according to ISO 4355) 67
C.2.3 Calculation of the thermal coefficient Ct 69
C.3 Special snow load shape coefficients for greenhouses 71
C.3.1 General 71
C.3.2 Pitched roofs of greenhouses 72
C.3.3 Arched roofs of greenhouses 76

Annex D (informative) Ultimate limit states for arches 78

D.1 General 78
D.2 Equivalent imperfections 78
D.3 First order elastic and linear buckling (Euler buckling) 78
D.4 Second order elastic 79
D.5 Second order elastic-plastic 79
D.6 Equivalent model for the behaviour of cross-sections of thin walled tubes 79

Annex E (normative) Earthquake 81

E.1 Classification 81
E.2 Importance factors 81
E.3 Earthquake return periods 82
E.4 Seismic actions 82

Annex F (normative) Owner's manual and identification plate 83

F.1 General 83
F.2 Owner's manual 83
F.3 Identification plate 84

Annex G (informative) Instructions for maintenance and repair 85

G.1 General 85
G.2 Access to the roof 85
G.3 Glass stock and emergency repair kits 85

Annex H (informative) Structural details 86

H.1 General 86
H.2 Forces due to temperature effects 86
H.3 Contact forces between glass panels and cladding bars 86
H.4 Rainwater capacities of gutters, gutter outlets and downpipes 87
H.5 Aperture ratio 87
H.6 Light interception ratio 89

Annex I (informative) Calculation method for film covered greenhouses 91

I.1 General 91
I.2 Actions on film covered greenhouses 91
I.3 Transmission of forces from the film to the supporting structure 91
I.4 Verification of the film 94

Bibliography 95
