

DIN EN 13031-1:2020-02 (E)

Greenhouses - Design and construction - Part 1: Commercial production greenhouses

Contents	Page
European foreword	5
Introduction	6
1 Scope	7
2 Normative references	7
3 Terms and definitions	8
4 Symbols and abbreviations	9
5 Basis of design for greenhouse structures	13
5.1 General	13
5.2 Classes of greenhouse structures	13
5.2.1 General	13
5.2.2 Tolerance to frame displacements of the cladding system	14
5.2.3 Design working life of the structure	14
5.3 Reliability of commercial production greenhouses	14
5.3.1 General classification, recommendations	14
5.3.2 Partial factors F	15
5.3.3 Combination coefficients	15
5.3.4 Basis for actions on greenhouses	16
6 Ultimate limit states	16
6.1 General	16
6.2 Design calculations	17
6.3 Testing	17
7 Serviceability limit states	17
7.1 General	17
7.2 Design calculations	17
7.3 Testing	17
8 Tolerances	17
8.1 General	17
8.2 Tolerances specific to Type A greenhouses	21
8.3 Tolerances specific to Type B greenhouses	23
9 Durability, maintenance and repair	24
9.1 General	24
9.2 Durability	24
9.3 Maintenance and repair	24
10 Actions on greenhouses	24
10.1 General	24
10.2 Representative values of actions	25
10.2.1 Permanent actions	25
10.2.2 Variable actions	25
10.2.3 Accidental actions	29
10.3 Combination of actions	29

11	Displacements and deflections (SLS)	31
11.1	Displacements of Class A greenhouses	31
11.1.1	Displacements of connecting points of columns with foundations	31
11.1.2	Displacements at gutter level	31
11.1.3	Displacements of arches	35
11.2	Deflections of Type A greenhouses	36
11.2.1	General	36
11.2.2	Deflections of components of a greenhouse	36
Annex A (normative) Structural capacity of glass panels		38
A.1	General	38
A.2	Calculation method for glass panels	38
A.3	Materials	41
Annex B (normative) Wind actions		44
B.1	General	44
B.2	Aerodynamic coefficients	44
B.2.1	General	44
B.2.2	Greenhouses with pitched roofs	45
B.2.3	Greenhouses with arched roofs	51
B.2.4	Internal pressures	62
B.2.5	Surface friction	63
B.2.6	Ventilators	63
B.2.7	Permeable cladding	63
B.3	Dynamic coefficients for gust wind response	64
Annex C (normative) Snow actions		65
C.1	General	65
C.2	Thermal coefficient Ct	67
C.2.1	Requirements for heated greenhouses with controlled heating	67
C.2.2	Special heat transmittance (Uo value according to ISO 4355)	67
C.2.3	Calculation of the thermal coefficient Ct	69
C.3	Special snow load shape coefficients for greenhouses	71
C.3.1	General	71
C.3.2	Pitched roofs of greenhouses	72
C.3.3	Arched roofs of greenhouses	76
Annex D (informative) Ultimate limit states for arches		78
D.1	General	78
D.2	Equivalent imperfections	78
D.3	First order elastic and linear buckling (Euler buckling)	78
D.4	Second order elastic	79
D.5	Second order elastic-plastic	79
D.6	Equivalent model for the behaviour of cross-sections of thin walled tubes	79
Annex E (normative) Earthquake		81
E.1	Classification	81
E.2	Importance factors	81
E.3	Earthquake return periods	82
E.4	Seismic actions	82
Annex F (normative) Owner's manual and identification plate		83
F.1	General	83
F.2	Owner's manual	83
F.3	Identification plate	84

Annex G (informative) Instructions for maintenance and repair	85
G.1 General	85
G.2 Access to the roof	85
G.3 Glass stock and emergency repair kits	85
Annex H (informative) Structural details	86
H.1 General	86
H.2 Forces due to temperature effects	86
H.3 Contact forces between glass panels and cladding bars	86
H.4 Rainwater capacities of gutters, gutter outlets and downpipes	87
H.5 Aperture ratio	87
H.6 Light interception ratio	89
Annex I (informative) Calculation method for film covered greenhouses	91
I.1 General	91
I.2 Actions on film covered greenhouses	91
I.3 Transmission of forces from the film to the supporting structure	91
I.4 Verification of the film	94
Bibliography	95
