ISO 834-13:2019 (E)

Fire-resistance tests — Elements of building construction — Part 13: Requirements for the testing and assessment of applied fire protection to steel beams with web openings

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Symbols and abbreviated terms

5 Test equipment

5.1 General
5.2 Furnace
5.3 Test conditions

6 Test specimens

6.1 General
6.2 Precautions against erroneous results
6.3 Construction of steel test specimens
6.3.1 Cellular beam test sections
6.3.2 Application of the fire protection to the test sections
6.4 Composition of test specimen component materials
6.4.1 Steel sections
6.4.2 Fire protection materials
6.4.3 Fire protection thickness requirements
6.5 Selection of test specimens — Test packages

7 Installation of test specimens

7.1 Fixing
7.2 Installation pattern
7.3 Furnace load
7.4 Conditioning of the test specimens

8 Application of instrumentation

8.1 General
8.2 Instrumentation for measurement of furnace temperature
8.2.1 General
8.2.2 Furnace temperature in the region of test specimens
8.3 Instrumentation for measurement and determination of steel temperatures
8.3.1 Location of thermocouples attached to the beams
8.3.2 Location of web reference thermocouples
8.4 Instrumentation for measurement of pressure

9 Test procedure

9.1 General
9.2 Furnace temperature and pressure
9.3 Temperature of steelwork
9.4 Observations
9.5 Termination of test

10 Test results

10.1 Acceptability of test results
10.2 Test report and presentation of test results

11 Assessment

11.1 General
11.2 Determination of web post and web reference temperatures
11.2.1 Calculation of web post temperatures
11.2.2 Calculation of web reference temperature
11.3 Determination of web-post lines
11.4 Additional thermal modification factors
11.5 Location of limiting temperatures
11.6 Determination of the elemental multi-temperature analysis (EMTA)

12 Assessment report

13 Limits of the applicability of the results of the assessment

Annex A (informative) Determination of product thickness on beams with web openings

A.1 General
A.2 Analysis for any fire protection material
A.3 Iterative thickness analysis incorporating product specific fire protection data
A.4 Iterative steel temperature analysis incorporating product specific fire protection data

Annex B (informative) Logic for determining the web post average temperature
