ISO 834-14:2019 (E)

Fire-resistance tests — Elements of building construction — Part 14: Requirements for the testing and assessment of applied fire protection to solid steel bar

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Symbols and abbreviated terms

5 Test equipment

5.1 General
5.2 Furnace
5.3 Loading equipment

6 Test conditions

6.1 General
6.2 Support conditions
6.3 Number of test specimens
6.4 Size of test specimens
6.5 Construction of steel test specimens
6.5.1 Protected steel bars
6.5.2 Application of the fire protection material
6.6 Composition of test specimen component materials
6.6.1 Steel specification
6.6.2 Fire protection materials
6.6.2.1 General
6.6.2.2 Thickness of applied fire protection material
6.6.2.2.1 Preformed casings, slabs and boards
6.6.2.2.2 Spray passive coatings
6.6.2.2.3 Reactive coatings
6.6.2.3 Density of passive fire protection materials
6.6.2.4 Verification of the test specimen
6.7 Selection of test specimens
6.7.1 Principle of selection

7 Installation of the test specimens

7.1 Test specimen installation patterns
7.2 Installation of the test specimens
7.3 Furnace load

8 Conditioning of the test specimens

9 Application of instrumentation

9.1 General
9.2 Instrumentation for measurement and control of furnace temperature
9.2.1 General
9.2.2 Furnace temperature in the region of test specimens
9.2.3 Instrumentation for the measurement of steel temperatures
9.3 Instrumentation for the measurement of pressure

10 Test procedure

10.1 General
10.2 Furnace temperature and pressure
10.3 Steelwork temperature
10.4 Observations
10.5 Termination of test

11 Test results

11.1 Acceptability of test results
11.2 Presentation of test results

12 Assessment

12.1 General
12.2 Assessment procedure for thermal performance

13 Assesment report

14 Limits of the applicability of the results of the assessment

Annex A (informative) Support to specimens suspended from the furnace roof

A.1 Support to specimens

Annex B (normative) Linear interpolation and extension analysis

B.1 General
B.1.1 Step 1 — Input data
B.1.2 Step 2 — Determine time of maximum average temperatures
B.1.3 Step 3 — Determine protection thicknesses for specified temperature and rating period
B.1.4 Step 4 — Determine protection thickness for intermediate steel specimens
B.1.5 Step 5 — Report results
B.2 Determination of the nominal thickness if the graphical assessment methodology is used
B.2.1 General
B.2.2 Permitted extension range in fire protection thickness
B.2.3 Permitted extension range in dimensions

Annex C (informative) Loaded test procedures

C.1 General
C.2 Furnace chamber
C.3 Steel bar
C.4 Loading
