DIN EN 12697-11:2020-05 (E)

Bituminous mixtures - Test methods - Part 11: Determination of the affinity between aggregate and bitumen

Contents

Page

European foreword 4

1 Scope 6

2 Normative references 6

3 Terms and definitions 6

4 Principle 7

5 Rolling bottle method 8
5.1 Equipment 8
5.2 Preparation of test specimens 11
5.2.1 Aggregate 11
5.2.2 Bitumen 12
5.2.3 Mixing aggregate and bitumen 12
5.3 Conditioning 13
5.4 Procedure 14
5.5 Calculation and expression of results 15
5.6 Test report 15
5.7 Precision 16

6 Static method 17
6.1 Equipment 17
6.1.1 Flat bottomed container 17
6.1.2 Mixing bowl 17
6.1.3 Heating apparatus 17
6.2 Solvent and other materials 17
6.3 Preparation of test specimens 17
6.3.1 Aggregate 17
6.3.2 Bitumen 17
6.4 Procedure 17
6.5 Calculation and expression of results 18
6.6 Test report 18
6.7 Precision 19

7 Boiling water stripping method 19
7.1 General 19
7.2 Equipment and materials 19
7.3 Sample preparation 21
7.3.1 Aggregate 21
7.3.2 Bitumen 21
7.3.3 Mixing aggregate and bitumen 21
7.4 Conditioning 22
7.5 Test procedure 22
7.5.1 Establishing the acid/base equivalence factor 22
7.5.2 Establishing the calibration curve 22
7.5.3 Stripping test 24
7.6 Calculation and expression of results 25
7.6.1 Determination of the calibration curve 25
7.6.2 Calculation of the degree of bitumen coverage 26

7.7 Test report 26
7.8 Precision 26

Annex A (informative) Guidance for estimation of the degree of bitumen coverage 27
