## Sound insulation in buildings - Part 5: Increased requirements

---

<b>Contents</b>		<b>Page</b>
Foreword .....		4
Introduction .....		6
1	Scope .....	7
2	Normative references .....	8
3	Terms and definitions .....	8
4	Characteristic quantities for the requirements .....	9
5	Airborne and impact sound insulation in buildings with living and working areas .....	9
5.1	Increased requirements for sound insulation in multi-family dwellings and in mixed-use buildings .....	9
5.2	Increased requirements between single-family terraced houses and between semi-detached houses .....	11
6	Airborne and impact sound insulation in non-residential buildings .....	13
6.1	Hotels and lodging establishments .....	13
6.2	Hospitals and sanatoriums .....	14
7	Airborne sound insulation in external building components .....	16
8	Increased sound insulation against noise from building services equipment .....	16
9	Sound insulation against noise from HVAC systems in personal living areas .....	17
10	Verification by calculation and testing of acoustics in buildings .....	18
10.1	General .....	18
10.2	Verification by calculation .....	18
10.3	Testing of acoustics in buildings .....	18
Annex A (informative)	Description of perceptibility .....	19
Bibliography .....		21
Tables	Table 1 -- Increased requirements for sound insulation in multi-family dwellings and in mixed- use buildings .....	9
	Table 2 -- Increased requirements for airborne sound insulation and impact sound insulation between single-family terraced houses and between semi-detached houses .....	12
	Table 3 -- Increased requirements for airborne sound insulation and impact sound insulation in hotels and lodging establishments .....	13
	Table 4 -- Increased requirements for airborne sound insulation and impact sound insulation in hospitals and sanatoriums .....	14
	Table 5 -- Increased requirements for maximum permissible A-weighted normalized sound pressure levels in other rooms requiring protection, generated by building services equipment .....	17

**Table 6 -- Maximum permissible A-weighted normalized sound pressure levels in rooms requiring protection in personal dwellings, generated by HVAC systems in personal living areas ... 18**

**Table A.1 -- Description of the subjective perceptibility of usual noises with sound insulation multi-family dwellings ..... 20**
