

DIN EN 16303:2020-10 (E)

Road restraint systems - Validation and verification process for the use of virtual testing in crash testing against vehicle restraint system

Contents	Page
European foreword.....	5
Introduction	6
1 Scope.....	7
2 Normative references.....	7
3 Terms and definitions	7
4 Symbols and abbreviations	8
5 Requirements for numerical vehicle model.....	9
5.1 Modelling.....	9
5.2 General vehicle model behaviour assessment	10
5.3 Test methodology.....	10
5.4 Verification.....	13
5.5 Reporting	13
6 Requirements for numerical model of vehicle restraint system	13
6.1 Modelling.....	13
6.2 Validation and verification	14
6.3 Reporting	14
7 Requirements for numerical model of passive safety device	14
7.1 Modelling.....	14
7.2 Validation and verification	14
7.3 Reporting	14
8 Requirements for validation of virtual testing against test item.....	14
8.1 General.....	14
8.2 Test specifications	15
8.3 Comparison tables	17
8.4 Reporting	22
9 Requirements for verification of virtual testing against vehicle restraint systems and passive safety devices.....	23
9.1 General.....	23
9.2 Finite element model verification.....	23
9.3 Multi-body model verification.....	23
9.4 Standard report and output parameters.....	24
Annex A (normative) Virtual testing – Template for report.....	25
A.1 General.....	25
A.2 Verification and validation report.....	25
A.3 New performance report.....	34
Annex B (normative) Requirements for the entity (person/group) performing and verifying VT activities.....	42
Annex C (normative) Validation procedures of a vehicle for crash test analysis	44
C.1 General.....	44
C.2 Vehicle setup – Idle test (Test 1.1)	44

C.3	Vehicle suspension and steering kinematics.....	44
C.4	Vehicle handling.....	46
C.5	Vehicle crashworthiness - Test against rigidwall / rigid pole (Test 4.1 and 4.2).....	46
Annex D	(informative) Considerations on the modelling techniques of a vehicle.....	47
D.1	General	47
D.2	General scheme of a vehicle.....	47
D.3	Vehicle validation considerations	48
D.4	Step by step development of a vehicle for crash test analysis.....	49
Annex E	(informative) Recommendations and criteria for finite element vehicle models addressed to virtual testing.....	50
E.1	Components to be modelled	50
E.2	Model organization	53
E.3	General recommendations for the material of finite element vehicle models addressed to virtual testing.....	56
E.4	General recommendations for the mesh of finite element vehicle models addressed to virtual testing.....	57
Annex F	(informative) Recommendations and criteria for multi-body vehicle models addressed to virtual testing.....	61
F.1	Multi-body models	61
F.2	General requirements.....	61
F.3	Modelling requirements	61
F.4	Model organization	62
F.5	General recommendations for the material of multi-body-element vehicle models addressed to virtual crash test	74
Annex G	(informative) Considerations on the modelling techniques of a vehicle restraint system.....	75
G.1	General	75
G.2	Finite element and multi-body approaches.....	75
G.3	Finite element guidelines	76
G.4	Multi-body guidelines	76
G.5	Step by step development of a vehicle restraint system	76
G.6	Verification of the model	78
Annex H	(informative) Recommendations and criteria for finite element vehicle restraint system models addressed to virtual testing.....	80
H.1	Material recommendations for finite element vehicle restraint system models addressed to virtual testing.....	80
H.2	General recommendations for the mesh of finite element vehicle restraint system models addressed to virtual testing	80
H.3	2D-mesh specifications.....	80

H.4	Welding and connections	81
H.5	3D-mesh specifications – Mesh features.....	81
Annex I	(informative) Recommendations and criteria for multi-body vehicle restraint system models addressed to virtual crash testing.....	82
I.1	Introduction.....	82
I.2	Welding and connections	82
I.3	Model validation.....	82
Annex J	(informative) Failure modes.....	83
Bibliography	85
