ISO 22899-1:2021 (E)

Determination of the resistance to jet fires of passive fire protection materials — Part 1: General requirements

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Principle

5 Test configurations

5.1 General
5.2 Internal configuration
5.3 External configuration

6 Construction of the test items and substrates

6.1 General
6.2 Material
6.3 Nozzle
6.4 Flame re-circulation chamber
6.5 Protective chamber
6.6 Panel test specimens (internal configuration)
6.7 Structural steelwork test specimens (internal configuration)
6.8 Tubular section test specimens (external configuration)

7 Passive fire protection systems

7.1 General
7.2 Panel test specimens
7.3 Structural steelwork test specimens
7.4 Tubular section test specimens
7.5 Assembly specimens
7.5.1 General
7.5.2 Requirements for assemblies mounted on panels
7.5.3 Cable transit systems
7.6 Pipe penetration systems

8 Instrumentation

8.1 General
8.2 Panel test specimens
8.3 Structural steelwork test specimens
8.4 Tubular section test specimens
8.5 Assembly specimens
8.5.1 General
8.5.2 Panel mounted cable transit systems
8.5.3 Tubular section mounted assemblies
8.6 Recommended instrumentation of pipe penetration seals

9 Test apparatus and conditions

9.1 Nozzle geometry and position
9.1.1 General
9.1.2 Nozzle position for panel (including panel assemblies) and steelwork tests

9.1.3 Nozzle position for tubular section (including assemblies) tests
9.2 Fuel
9.3 Test environment

10 Test procedure

11 Repeatability and reproducibility

12 Uncertainty of measurement

13 Test report

14 Practical application of test results

14.1 General
14.2 Performance criteria
14.2.1 General
14.2.2 Coatings and spray-applied materials
14.2.2.1 Substrate temperature
14.2.2.2 Reacted/unreacted material remaining and condition of the reinforcement (if present)
14.2.3 Systems and assemblies
14.2.3.1 System temperature
14.2.3.2 Loss of integrity
14.2.3.3 Loss of insulation
14.3 Factors affecting the validity of the test
14.3.1 General
14.3.2 Interruption of the jet fire
14.3.3 Failure of thermocouples
14.3.4 Failure of the re-circulation chamber connection

Annex A (normative) Methods of fixing thermocouples

A.1 General
A.2 “Quick Tip” attachment
A.3 Capacitive discharge welding
A.4 Steel shim method
A.5 Drilling and peening
A.6 Adhesive
A.7 Disc thermocouples
A.8 Central web thermocouples (structural steelwork test specimen)

Annex B (informative) Example test report

Page count: 43
