DIN EN 1993-1-1:2025-04 (E)

Eurocode 3 - Design of steel structures - Part 1-1: General rules and rules for buildings

Contents

Page

European foreword 5

0 Introduction 7

1 Scope 10

2 Normative references 10

3 Terms, definitions and symbols 10
3.1 Terms and definitions 10
3.2 Symbols and abbreviations 12
3.3 Symbols for member axes 21

4 Basis of design 24
4.1 General rules 24
4.1.1 Basic requirements 24
4.1.2 Structural reliability 24
4.1.3 Robustness 24
4.1.4 Design service life for buildings 24
4.1.5 Durability 24
4.2 Principles of limit state design 25
4.3 Basic variables 25
4.3.1 Actions and environmental influences 25
4.3.2 Material, geometrical and product properties 25
4.4 Verification by the partial factor method 25
4.4.1 Design values of actions 25
4.4.2 Design values of material properties 25
4.4.3 Design values of geometrical properties 26
4.4.4 Tolerances 26
4.4.5 Design resistances 27
4.5 Design assisted by testing 27

5 Materials 27
5.1 General 27
5.2 Structural steel 27
5.2.1 Material properties 27
5.2.2 Ductility requirements 29
5.2.3 Fracture toughness 30
5.2.4 Through-thickness properties 30
5.2.5 Values of other material properties 31
5.3 Connecting devices 31
5.4 Other prefabricated products in buildings 31

6 Durability 31

7 Structural analysis 32
7.1 Structural modelling for analysis 32
7.1.1 Basic assumptions 32
7.1.2 Joint modelling 32
7.2 Global analysis 32
7.2.1 Consideration of second order effects 32

7.2.2 Methods of analysis for ultimate limit state design checks 35
7.3 Imperfections 39
7.3.1 Basis 39
7.3.2 Sway imperfections for global analysis of frames 40
7.3.3 Equivalent bow imperfection for global and member analysis 42
7.3.4 Combination of sway and equivalent bow imperfections for global analysis of frames 44
7.3.5 Imperfections for analysis of bracing systems 44
7.3.6 Imperfection based on elastic critical buckling modes 47
7.4 Methods of analysis considering material non-linearities 49
7.4.1 General 49
7.4.2 Elastic global analysis 49
7.4.3 Plastic global analysis 50
7.5 Classification of cross-sections 51
7.5.1 Basis 51
7.5.2 Classification 51
7.6 Cross-section requirements for plastic global analysis 52

8 Ultimate limit states 56
8.1 Partial factors 56
8.2 Resistance of cross-sections 56
8.2.1 General 56
8.2.2 Section properties 58
8.2.3 Tension 62
8.2.4 Compression 63
8.2.5 Bending 63
8.2.6 Shear 64
8.2.7 Torsion 67
8.2.8 Combined bending and shear 68
8.2.9 Combined bending and axial force 70
8.2.10 Combined bending, shear and axial force 73
8.2.11 Resistance to transverse forces 74
8.3 Buckling resistance of members 76
8.3.1 Uniform members in compression 76
8.3.2 Uniform members in bending 81
8.3.3 Uniform members in bending and axial compression 87
8.3.4 General method for lateral and lateral torsional buckling of structural components 92
8.3.5 Lateral torsional buckling of members with plastic hinges in buildings 93
8.4 Uniform built-up compression members 95
8.4.1 Assumptions and constructional details 95
8.4.2 Design forces for components 98
8.4.3 Resistance of components of laced compression members 99
8.4.4 Resistance of components of battened compression members 100
8.4.5 Closely spaced built-up members 102

9 Serviceability limit states 103
9.1 General 103
9.2 Deformations and dynamic effects for buildings 103

10 Fatigue 103

Annex A (normative) Selection of execution class 105

A.1 Use of this Annex 105
A.2 Scope and field of application 105
A.3 Execution class 105
A.4 Selection process 105
A.5 Execution class and partial factors 106

Annex B (normative) Design of semi-compact sections 107

B.1 Scope and field of application 107
B.2 Elasto-plastic section modulus 107

B.3 Resistance of cross-sections 108
B.4 Buckling resistance of members 109

Annex C (normative) Additional rules for uniform members with mono-symmetric cross- sections and for members in bending, axial compression and torsion 110

C.1 Additional rules for uniform members with mono-symmetric cross-section 110
C.2 Additional rules for uniform members in bending, axial compression and torsion 111

Annex D (normative) Continuous restraint of beams in buildings 114

D.1 Scope and field of application 114
D.2 Continuous lateral restraints 114
D.3 Continuous torsional restraints 115

Annex E (informative) Basis for the calibration of partial factors 117

E.1 Use of this informative annex 117
E.2 Scope and field of application 117
E.3 Calibration 117
