DIN EN ISO 22097:2024-01 (E)

Thermal insulation for buildings - Reflective insulation products - Determination of thermal performance (ISO 22097:2023)

Contents

Page

European foreword ... **4**

Foreword ... **5**

Introduction ... **6**

1 Scope ... **7**

2 Normative references ... **7**

3 Terms, definitions and symbols ... **8**
3.1 Terms and definitions ... 8
3.2 Symbols and units ... 8

4 Description of product types ... **9**
4.1 Product classification ... 9
4.2 Product Type 1 ... 9
4.3 Product Type 2 ... 10
4.4 Product Type 3 ... 10
4.5 Product Type 4 ... 11

5 Methods of assessment ... **12**
5.1 General ... 12
5.2 Thickness measurement ... 12
5.3 Test specimens ... 12
5.3.1 Size and number of specimens ... 12
5.3.2 Conditioning and specimen preparation ... 12
5.4 Determination of thermal resistance — Outline ... 13
5.5 Determination of core thermal resistance of product Type 1 ... 13
5.5.1 Test thicknesses ... 13
5.5.2 Product thickness greater than 20 mm ... 13
5.5.3 Product thickness less than or equal to 20 mm ... 14
5.5.4 For all thicknesses and nominal thermal resistances ... 14
5.6 Determination of core thermal resistance of Product Type 2 ... 14
5.6.1 General ... 14
5.6.2 Product Type 2 with surface indentations less than 2 mm in depth ... 14
5.6.3 Product Type 2 with surface indentations greater than or equal to 2 mm, but less than 5 mm in depth ... 14
5.6.4 Product Type 2 with surface indentations 5 mm in depth or greater ... 14
5.6.5 For either all thicknesses or nominal thermal resistances, or both ... 15
5.7 Determination of core thermal resistance of product Type 3 (Method C) ... 15
5.7.1 Principle ... 15
5.7.2 Determination of the need for specimen conditioning ... 15
5.7.3 Air cavity and specimen installation ... 15
5.7.4 Hot box test conditions ... 18
5.7.5 Allowance for heat transfer around the specimen (edge surround) ... 18
5.7.6 Calculating the core thermal resistance of the product ... 20
5.8 Determination of the thermal performance of product Type 4 ... 20
5.9 Emissivity ... 21
5.9.1 General ... 21
5.9.2 Measurement of emissivity ... 21

6 Uncertainty **22**
6.1 General 22
6.2 Thickness measurements 22
6.3 Use of thermocouples on thin samples in a guarded hot plate or in heat flow meter measurement 22
6.4 Use of dummy insulation specimens 22
6.5 Derivation of the core resistance of a Type 3 product from hot box measurements 22
7 Expression of results **23**
7.1 Results derived from hot plate and emissivity measurements (products Type 1 and 2) 23
7.2 Results derived from hot box and emissivity measurements (product Types 1, 2 and 3) 23
7.3 Results derived from emissivity measurements only (product Type 4) 24
8 Report **24**
Annex A (normative) **Decision making flow chart for identification of product types** **25**
Annex B (normative) **Selection of test methodology for product type 1 when using a hot plate method** **26**
Annex C (normative) **Selection of the measurement technique for Product Type 2** **27**
Annex D (normative) **Measurement of emissivity using a thermal infra-red apparatus** **28**
Annex E (normative) **"Dummy specimen" technique for the heat flow meter apparatus** **34**
Bibliography **36**
