ISO 5091-1:2023-07 (E)

Structural intervention of existing concrete structures using cementitious materials - Part 1: General principles

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Investigation of existing structure 3
4.1 General 3
4.2 Investigation 3
4.2.1 Investigation using documents, records 3
4.2.2 On-site investigation 4

5 Intervention design 4
5.1 General 4
5.2 Structural plan 4
5.3 Structural details 4

6 Materials 5
6.1 General 5
6.2 Materials in existing structure 5
6.3 Materials used in repairing or strengthening parts 6
6.3.1 General 6
6.3.2 Cementitious materials 6
6.3.3 Reinforcing materials 7
6.3.4 Filling materials 7
6.3.5 Bonding products 8
6.4 Characteristic values and design values of materials 8
6.4.1 General 8
6.4.2 Cementitious materials 8
6.4.3 Reinforcing materials 10
6.4.4 Bonding products 10

7 Actions 11
7.1 General 11
7.2 Actions for intervention design 11

8 Performanceverificationforrepairedorstrengthenedstructure 12
8.1 General 12
8.2 Calculation of response values 13
8.2.1 General 13
8.2.2 Modelling 13
8.2.3 Structural analysis 13
8.2.4 Calculation of response values 13
8.3 Durability verification 14
8.3.1 General 14
8.3.2 Verification related to steel corrosion 14
8.3.3 Verification related to degradation of cementitious materials 15

8.4 Safety verification 15
8.4.1 General 15
8.4.2 Verification related to failure 15
8.4.3 Verification related to fatigue failure 16
8.5 Serviceability verification 17
8.5.1 General 17
8.5.2 Stress level limit 17
8.5.3 Verification related to appearance 17
8.5.4 Verification related to vibration 17
8.5.5 Verification related to water-tightness 17
8.6 Restorability verification 17
8.6.1 General 17
8.6.2 Structural details related to seismic performance 18
8.7 Structural details 18

9 Execution 18
9.1 General 18
9.2 Construction plan 18
9.3 Construction 18
9.4 Inspection 18

10 Records 18

11 Maintenance 19
