DIN EN 15941:2024-10 (E)

Sustainability of construction works - Data quality for environmental assessment of products and construction work - Selection and use of data

Contents

Page

European foreword 6

1 Scope 7

2 Normative references 7

3 Terms and definitions 8

4 Abbreviations 10

5 Types of data at product, building and construction works level 10
5.1 General 10
5.2 Sources of generic data for use at product, building and construction works level 11
5.3 Examples of data and their uses at building and construction works level 11
5.4 Types of EPD 14

6 Data quality criteria and aspects for products and construction works 17
6.1 General 17
6.2 International Reference Life Cycle Data System data 17
6.3 Time-related coverage 17
6.3.1 General 17
6.3.2 General time related criteria 18
6.3.3 Time-related criteria for construction products and buildings 18
6.3.4 Time related meta-data for ILCD data sets 19
6.4 Geographical coverage 20
6.4.1 General geography related criteria 20
6.4.2 Geography related criteria for construction products and buildings 21
6.4.3 Geography related meta-data for ILCD data sets 21
6.5 Technological coverage 22
6.5.1 General 22
6.5.2 Technology-related criteria at product level 22
6.5.3 Technology related criteria for data quality at building level 22
6.5.4 Technology related meta-data for ILCD data sets 23
6.6 Aspect of Precision 24
6.6.1 General 24
6.6.2 Precision related meta-data for ILCD data sets 25
6.7 Aspect of Completeness 25
6.7.1 General 25
6.7.2 Aspect of Completeness at product level 26
6.7.3 Aspect of Completeness at building level 26
6.7.4 Completeness related meta-data for ILCD data sets 27
6.8 Aspect of Consistency 27
6.8.1 General 27
6.8.2 Consistency related meta-data for ILCD data sets 28
6.9 Sources of the data 30
6.10 Meta-data for ILCD data sets related to Sources of data 30

7 Data Quality at Product level 31
7.1 Assessing Data Quality at product level 31
7.1.1 General 31
7.1.2 Relevant data 31

7.1.3 Assessing data quality of average or specific data 32
7.1.4 Assessing data quality of generic data 33
7.1.5 Assessing data quality of the final EPD 33
7.2 Selecting and Collecting data at product level 33
7.2.1 General 33
7.2.2 Selecting raw data 34
7.2.3 Selection of specific and generic data 36
7.3 Reporting data quality at Product Level 39
7.3.1 General 39
7.3.2 Reporting data quality in the project report 39
7.3.3 Reporting data quality in the EPD 40
7.3.4 Other data quality information in the EPD 42
7.3.5 Providing the EPD in ILCD format 42

8 Data quality at building level 42
8.1 General 42
8.2 Assessment during specific design and decision steps/stages 43
8.3 Assessing data quality at building level 43
8.3.1 General 43
8.3.2 Time related 44
8.3.3 Geography related 44
8.3.4 Technology Related 44
8.3.5 Completeness 45
8.3.6 Consistency 47
8.3.7 Plausibility 48
8.3.8 Precision 48
8.4 Selection of quantity data, environmental data and other information 48
8.4.1 General 48
8.4.2 Selecting data to describe the building 48
8.4.3 Selection of quantity data for the building assessment 49
8.4.4 Selection of environmental data for products and processes for the building assessment 50
8.5 Data quality of the assessment results of the building's environmental performance 53
8.5.1 General 53
8.5.2 Data quality evaluation of quantification 53
8.5.3 Data quality evaluation during Type 1 and Type 2 Assessments 54
8.5.4 Data quality evaluation during Type 2, Type 3 and Type 4 assessments 54
8.5.5 Summarizing data quality 55
8.6 Databases, data set providers and tools 56
8.7 Reporting data quality generally at building level 56
8.8 Verification and review 59

9 Data quality at civil engineering works level 59

Annex A (informative) Overview of definitions used in this document and those in EN 15804 and PEF and Level(s) 60

A.1 Overview of definitions 60
A.2 Foreground and background data 65
A.3 Raw data 65
A.4 Specific and generic data 65

Annex B (informative) Mass Balance at product level 66

Annex C (informative) Examples of reporting data quality in EPD 69

Annex D (informative) Examples of the use of a data selection at building level depending on goal and scope and data quality assessment 71

D.1 General 71
D.2 Early-stage design - no materials chosen 71
D.3 Early-stage design - Some materials chosen 72

D.4 Detailed Design Stage - Cladding comparison 73
D.5 Building Assessment for planning or regulatory purposes 74
D.6 Building Completion - As built assessment 74

Annex E (normative) Avoiding double counting in the selection of specific and generic data for energy at product and building level 75

E.1 General 75
E.1.1 General guidance 75
E.1.2 Overarching requirements for avoiding double counting in the selection of specific and generic data for energy at product and building level 75
E.1.2.1 Avoiding double counting 75

Ensuring transparency 75

Use of Contractual instruments 75
E.2 Avoiding double counting in the selection of specific and generic data for energy at product and building level 75
E.2.1 Overarching Principles 75
E.2.1.1 General 75
E.2.1.2 Requirements for contractual instruments 76
E.2.1.3 Requirement for residual mix 77
E.2.1.4 Recommendation for consistent use of contractual instruments and residual mix 78
E.2.2 Product level Electricity - modelling foreground, upstream and downstream processes within control of the manufacturer(s) 78
E.2.2.1 General 78
E.2.2.2 Electricity from the grid 78
E.2.2.3 Electricity from a directly connected supplier 78
E.2.2.4 Internally generated electricity 79
E.2.2.5 Requirement for modelling of electricity with contractual instruments 79
E.2.2.6 Requirement for transparency 79
E.2.3 Product level Biogas and the gas network - modelling foreground, upstream and downstream data within the control of the manufacturer(s) 79
E.2.3.1 General 79
E.2.3.2 Biogas from the gas network 79
E.2.3.3 Biogas from a directly connected supplier 79
E.2.3.4 Internally generated biogas 80
E.2.3.5 Requirement for modelling of biogas with contractual instruments 81
E.2.3.6 Requirement for transparency 81
E.2.4 Product level - Other energy - modelling foreground, upstream and downstream data in the control of the manufacturer(s) 81
E.2.4.1 General 81
E.2.4.2 Requirement for modelling of other energy with contractual instruments 81
E.2.4.3 Requirement for transparency 81
E.2.5 Product level - Energy - modelling upstream data (A1-A3) not in the control of the manufacturer(s) 81
E.2.6 Product Level Energy - modelling downstream data (A4-C4 and Module D) 81
E.2.7 Building Level Energy - modelling energy use in the building in the Construction Stage, Use Stage, End-of-life stage and Module D2 82
E.2.8 Transparency 82
E.2.8.1 Reporting at product level in the Project Report 82
E.2.8.2 Reporting in EPD 83
E.2.8.3 Reporting at Building Level in the Project Report 83
E.2.8.4 Reporting in Building Level Communication 83

Annex F (informative) Data quality scheme for building level based on Level(s) 84
