

DIN 18008-3:2024-12 (E)

Glass in Building - Design and construction rules - Part 3: Point fixed glazing

Contents	Page
Foreword	5
1 Scope	6
2 Normative references	6
3 Terms and definitions, symbols and units	7
3.1 Terms and definitions	7
3.2 Symbols and units	8
3.2.1 Latin capital letters	8
3.2.2 Latin small letters	9
3.2.3 Greek small letters	9
4 Construction products	10
5 Conditions of application and design	12
6 Effects of actions and verification	15
6.1 Verification of load-bearing capacity and serviceability	15
6.2 Verification of residual load-bearing capacity	15
Annex A (informative) Materials	17
A.1 General	17
A.2 Material-related calculation parameters	17
A.3 Mathematical representation of laminated safety glass	17
Annex B (informative) Verifications carried out in the drill hole area using Finite Element models	19
B.1 General	19
B.2 Discretization in the drill hole area	19
Annex C (informative) Simplified method for verification of load-bearing capacity and serviceability of point-supported glazing	23
C.1 General	23
C.2 Symbols	23
C.3 Verification of the ultimate limit state	24
C.3.1 Verification in point-fixing area	24
C.3.2 Verification at span centre	30
C.3.3 Calculation for laminated safety glass	30
C.4 Verification of serviceability limit state	30
Annex D (normative) Experimental verification for glass fixings and intermediate materials ("Test specifications for point fixings")	31
D.1 General	31
D.2 Symbols	31
D.3 Determination of load-bearing capacity	32
D.4 Determining serviceability	33
D.5 Determining stiffness values	33
D.6 Documentation	34
Annex E (normative) Constructions with verified residual load-bearing capacity	36
E.1 General	36
E.2 Additional rules for overhead glazing	36
E.2.1 General	36

E.2.2	Supporting with plate-type fastenings	36
E.2.3	Combination of support types: linear support and plate-type fastenings	37
E.2.4	Linear support and suction disc point fixings.....	38
E.3	Additional rules for vertical glazing.....	38
Annex F (normative) All-glass installations — Additional requirements and simplified verification		
	verification	39
F.1	General.....	39
F.2	Application conditions.....	40
F.2.1	Glass products	40
F.2.2	Installation height.....	40
F.2.3	Glass dimensions and thicknesses.....	40
F.2.4	Support	41
F.3	Effects of actions and verification	41
F.3.1	General.....	41
F.3.2	Load-bearing capacity verification.....	42
F.3.3	Serviceability verification	42
F.3.4	Verification of redundancy.....	42
F.4	Dispensing with verification.....	43
F.5	Maintenance.....	43
	Bibliography	44

Figures

Figure 1	— Schematic diagram of angle definition	12
Figure 2	— Schematic diagram of plate-type fastening.....	12
Figure 3	— Schematic diagram of countersunk head holder.....	13
Figure 4	— Distances to edge and drill holes for countersunk head holders.....	14
Figure 5	— Distances to edge and drill holes for cylindrical holes.....	14
Figure 6	— Schematic diagram of clamp-type fastenings	14
Figure B.1	— Reference case: Flat plate with a centre hole subjected to bending moments at the edge	20
Figure C.1	— Example of a simplified point fixing model	26
Figure D.1	— Diagram for investigation of normal force load-bearing capacity.....	32
Figure D.2	— Diagram for investigation of shear force load-bearing capacity	32
Figure D.3	— Moment load.....	34
Figure E.1	— Inner surfaces in horizontal glazing	36
Figure E.2	— Surrounding rectangles for an example of a configuration of three (top row) or four point fixings.....	37
Figure E.3	— Schematic diagram of the combination of linear support and plate-type fastenings	38
Figure F.1	— Examples of all-glass installations.....	40

Tables

Table A.1 — Reference values for the calculational stiffness of separating materials.....	17
Table B.1 — Reference solutions for case 1 and case2	21
Table B.2 — Numerical values for k_{senk} and k_{zyl}	21
Table C.1 — Symbols, meaning and units.....	23
Table C.2 — Dimensionless stress intensity factors for a reference pane thickness $t_{\text{ref}} = 10 \text{ mm}$	27
Table C.3 — Dimensionless stress intensity factors for a reference pane thickness $t_{\text{ref}} = 10 \text{ mm}$	28
Table C.4 — Stress concentration factors k_{zyl} for cylindrical drill holes.....	29
Table C.5 — Stress concentration factors $k_{\text{senk,k}}$ for a countersink drill hole with tension at the conical drill hole edge	29
Table C.6 — Stress concentration factors $k_{\text{senk,z}}$ for a countersink drill hole with tension at the cylindrical drill hole edge	29
Table C.7 — Load distribution factors.....	30
Table D.1 — Symbols, meaning and units	31
Table E.1 — Glass configurations with verified residual load-bearing capacity, assuming rectangular support grid.....	37
