ISO 16521:2024-09 (E)

Design of concrete-filled steel tubular (CFST) hybrid structures

Contents

Page

Foreword vii

Introduction viii

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Symbols 5

5 Materials 7
5.1 General 7
5.2 Concrete 8
5.2.1 Cement 8
5.2.2 Aggregates 8
5.2.3 Water 8
5.2.4 Admixtures 8
5.2.5 Additions 8
5.2.6 Concrete mixture specification 8
5.3 Steel tubes 8
5.4 Steel reinforcement 9
5.4.1 Deformed reinforcement 9
5.4.2 Plain reinforcement 9
5.5 Other materials 9
5.5.1 Welding consumables 9
5.5.2 Fasteners 9
5.5.3 Protective paint systems 9
5.6 Storage of materials 9

6 Design and construction procedure 9

7 General guides 11
7.1 Limitations 11
7.1.1 CFST members 11
7.1.2 Trussed concrete-filled steel tubular (CFST) hybrid structures 12
7.1.3 Concrete-encased concrete-filled steel tubular (CFST) hybrid structures 12
7.2 Limit states 13
7.3 Ultimate limit state design format 14
7.3.1 General 14
7.3.2 Factored load effects 14
7.3.3 Design resistances 14
7.4 Serviceability limit state design format 15

8 Specific guides 15
8.1 Design working life 15
8.2 Selections of materials, structural plans and detailing 15
8.3 Seismic design requirements 15
8.4 Selections of constructional methods and techniques 15

9 Actions (loads) 16

9.1 General ... 16
9.2 Dead loads ... 16
9.3 Live loads ... 16
9.4 Snow loads ... 16
9.5 Wind forces ... 16
9.6 Earthquake forces ... 16
9.7 Thermal forces ... 17
9.8 Load partial factors and load combinations ... 17

10 Analysis ... 17

10.1 General ... 17
10.1.1 Structural analysis purpose ... 17
10.1.2 Structural analysis methods ... 17
10.1.3 Structural analysis requirements ... 17
10.1.4 Loading cases ... 18
10.1.5 Construction stage analysis ... 18
10.2 Stress-strain relationships for materials ... 18
10.2.1 General ... 18
10.2.2 Concrete ... 19
10.2.3 Steel ... 26
10.3 Indices for the strength and stiffness of CFST hybrid structures ... 28
10.3.1 CFST cross-section ... 28
10.3.2 CFST hybrid structures ... 30

11 Ultimate limit states of trussed concrete-filled steel tubular (CFST) hybrid structures ... 31
11.1 General ... 31
11.2 Resistances to compression and bending ... 31
11.2.1 Axial compression ... 31
11.2.2 Bending ... 34
11.2.3 Combined compression and bending ... 35
11.2.4 Resistances of CFST chords ... 39
11.2.5 Resistances of webs ... 45
11.3 Resistance to shear ... 46
11.3.1 With horizontal webs ... 46
11.3.2 With diagonal webs ... 46

12 Ultimate limit states of concrete-encased concrete-filled steel tubular (CFST) hybrid structures ... 46
12.1 General ... 46
12.2 Resistances of single-chord structures ... 46
12.2.1 Axial compression ... 46
12.2.2 Combined compression and bending ... 47
12.2.3 Tension ... 50
12.3 Resistances of four-chord structures ... 51
12.3.1 Axial compression ... 51
12.3.2 Combined compression and bending ... 51
12.4 Resistances of six-chord structures ... 55
12.4.1 Axial compression ... 55
12.4.2 Combined compression and bending ... 55
12.5 Resistances of slender structures ... 59
12.5.1 Axial compression ... 59
12.5.2 Combined compression and bending ... 60
12.6 Resistance subjected to long-term loading ... 60
12.7 Resistance to shear ... 60
12.8 Resistance to combined axial force, bending and shear ... 62

13 Serviceability limit states of concrete-filled steel tubular (CFST) hybrid structures ... 62
13.1 Calculation of structural response ... 62
13.2 Serviceability limitations ... 62

14 Protective design ... 62

14.1 General 62
14.1.1 Corrosion resistance 62
14.1.2 Fire resistance 63
14.1.3 Impact resistance 63
14.2 Design of corrosion resistance 63
14.2.1 Anti-corrosion measures 63
14.2.2 Corrosion resistance calculation 63
14.3 Design of fire resistance 64
14.3.1 Load ratio during fire 64
14.3.2 Fireproof coating 64

14.3.3 Fire resistance ratings 65
14.3.4 Detailing requirements 65
14.4 Design of impact resistance 66
14.4.1 Bending resistance under impact 66
14.4.2 Dynamic increase factor for circular CFST chords under impact 66
14.4.3 Deformation of circular CFST chords under impact 67

15 Connections 67
15.1 General 67
15.2 Joints of trussed concrete-filled steel tubular (CFST) hybrid structures 67
15.2.1 General requirements 67
15.2.2 Typical forms of joints 68
15.2.3 Welding requirements 69
15.2.4 Detailing requirements of webs 69
15.2.5 Inserted plate connections 70
15.2.6 Gusset plate connections 70
15.2.7 Intersecting welded plane K-joints and N-joints 71
15.2.8 Plane T-joints, Y-joints and X-joints 74
15.2.9 Multiplanar joints 74
15.3 Joints of concrete-encased concrete-filled steel tubular (CFST) hybrid structures 74
15.3.1 Steel beam-to-column ring plate joints 74
15.3.2 Reinforced concrete beam-to-column joints 75
15.3.3 Detailing requirements of beam-to-column joints 76
15.3.4 Connections between steel tubes 77
15.4 Column bases and supporting connections 78
15.4.1 Column bases and supporting connections of trussed CFST hybrid structures 78
15.4.2 Column bases of concrete-encased CFST hybrid structures 82
15.5 Fatigue design of joints 83
15.5.1 General requirements 83
15.5.2 Design methods 83
15.5.3 Hot spot stress ranges under constant amplitude fatigue 84
15.5.4 Hot spot stress ranges under variable amplitude fatigue 84
15.5.5 Detailing requirements 85

16 Construction and acceptance 86
16.1 General 86
16.2 Fabrication and erection of steel tubes 86
16.2.1 General 86
16.2.2 Documents 86
16.2.3 Fabrication 86
16.2.4 Surface protection 87
16.2.5 Transportation and erection 87
16.3 Construction of core concrete 87
16.3.1 General 87
16.3.2 General requirements 87
16.3.3 Mixture design 88
16.3.4 Requirements of self-compacting concrete 88
16.3.5 Use of cement plaster 88
16.3.6 Placement preparation 88
16.3.7 Placement methods 88
16.3.8 Placement process 88

16.3.9 Treatment of post-placement holes on steel tubes 88
16.3.10 Requirements of limiting values of core concrete void in steel tubes 88
16.4 Construction of concrete encasement 90
16.4.1 General 90
16.4.2 Construction preparation 90
16.4.3 Workability of concrete 90
16.4.4 Construction order 90
16.5 Inspection and acceptance 90
16.5.1 General 90

16.5.2 Steel structures 91
16.5.3 Core concrete 91
16.5.4 Concrete encasement 91
16.5.5 Documents and records 91

Annex A (informative) Long-term load coefficients for concrete-encased circular CFST hybrid structures 92

Annex B (informative) Fire resistance ratings of single-chord concrete-encased circular CFST hybrid structures 96
