

DIN EN 17990:2025-12 (E)

Thermal insulation and energy economy in buildings - Method to determine the durability of bondings with adhesive tapes and adhesive masses for the establishment of airtight layers under climatic conditions representative for indoor environments

3	Terms and definitions	6
4	Symbols and units	7
5	Testing	7
5.1	General	7
5.2	Test substrate	8
5.2.1	Reference substrate	8
5.2.2	Product combinations	8
5.3	Climatic boundary conditions	8
5.4	Apparatus	8
5.4.1	Pressure roller and support	8
5.4.2	Device for cutting sample strips (test pieces)	9
5.4.3	Tensile testing machine	9
5.4.4	Climatic chamber for artificial ageing	9
5.4.5	Conditioned room	9
5.4.6	Heating cabinet	9
5.5	Preparation for testing	9
5.5.1	General	9
5.5.2	Sample preparation for the test of single-sided and double-sided adhesive tapes	10
5.5.3	Sample preparation for the test of adhesive masses	12
5.5.4	Tables regarding sample preparation, conditioning and test procedures	13
5.6	Procedure	15
5.6.1	General	15
5.6.2	Execution of T-peel tests (adhesive tapes)	15
5.6.3	Execution of 180° peel test (adhesive masses)	17
5.6.4	Static peel test	18
5.7	Evaluation of tests	20
5.7.1	Determination of maximum and mean peel strength for the T-peel test and the 180° peel test according to 5.6.2 and 5.6.3	20
5.7.2	Evaluation of static peel test	22
6	Test report	22
Annex A (normative) Detailed description of the sample preparation for adhesive masses		23
Annex B (informative) Detailed description of the sample preparation for double sided adhesive tapes		25
B.1	General preparation for double sided adhesive tapes	25
B.2	Subsequent procedure for membranes	26
B.3	Subsequent procedure for beech wood substrates	27
