DIN EN 13036-8:2025-09 (E)

Road and airfield surface characteristics - Test methods - Part 8: Determination of transverse unevenness and crossfall indices

Contents

Page

European foreword 3

Introduction 5

1 Scope 6

2 Normative references 6

3 Terms and definitions 6

4 Symbols and abbreviated terms 9

5 Pre-processing of the transverse profile 10
5.1 General 10
5.2 Transverse profile measured with a traffic speed profilometer 11

6 Computation of indices 14
6.1 General 14
6.2 Rut depth indices 15
6.2.1 General 15
6.2.2 The Sliding Wire Rut Depth method (RSW) 16
6.2.3 The Total Transverse Unevenness method (RTTU) 16
6.2.4 The Left and Right Rut Depth method (RL and RR) 17
6.3 Other transverse indices 18
6.3.1 General 18
6.3.2 Ridge Height (RH) 19
6.3.3 Indices for water in ruts 19
6.3.4 Miscellaneous transverse indices 21
6.4 Crossfall index (CFR) 22

7 Measurement devices and their application 24
7.1 Measurement devices 24
7.2 Lateral positioning 25

8 Accuracy 25
8.1 General 25
8.2 Resolution of presented indices 25
8.3 Precision 25
8.4 Bias 26

9 Safety 26

10 Report for project level measurements 27

Annex A (informative) Measurement of indices of transverse unevenness and irregularities with a straightedge 28

Annex B (informative) The use of transverse indices 31

Annex C (informative) Implementation guide 32

Annex D (informative) Evaluating and using the transverse indices 33

Annex E (informative) Other transverse indices 34
