European foreword 7

0 Introduction 9

1 Scope 12
1.2 Assumptions 12

2 Normative references 13

3 Terms, definitions, symbols 14
3.1 Terms and definitions 14
3.1.1 Terms and definitions for piles 14
3.1.2 Terms and definitions relating to anchors, tension piles and waling 18
3.2 Symbols 25
3.2.1 General 25
3.2.2 Latin upper-case symbols 25
3.2.3 Latin lower-case symbols 28
3.2.4 Greek symbols 30
3.3 Convention for sheet pile axes 32

4 Basis of design 33
4.1 General rules 33
4.1.1 Basic requirements 33
4.1.2 Structural reliability and consequences of failure 34
4.1.3 Robustness 34
4.1.4 Design service life 35
4.1.5 Durability 35
4.1.6 Sustainability 35
4.2 Principles of limit state design 35
4.2.1 Design situations 35
4.2.2 Ultimate limit state criteria 35
4.2.3 Serviceability limit state criteria 36
4.3 Basic variables 37
4.3.1 Actions and environmental influences 37
4.3.2 Material and product properties and geometrical data 37
4.4 Verification by the partial factor method 38
4.4.1 Design values of actions 38
4.4.2 Design values of material properties 38
4.4.3 Design values of geometrical properties 38
4.4.4 Construction tolerances 38
4.4.5 Imperfections 38
4.5 Driveability 38
4.6 Design assisted by finite element analysis 38
4.6.1 General 38
4.6.2 Secondary elements 39
4.7 Design assisted by testing 39
4.8 Verification by observational method 40
4.9 Fatigue 40

5 Materials 40
5.1 General 40
5.2 Material properties for steel piles 40

5.2.1 Strength of bearing piles ... 40
5.2.2 Strength of hot rolled sheet piles ... 40
5.2.3 Strength of cold formed sheet piles ... 41
5.2.4 Strength of steel members used for combined walls ... 41
5.2.5 Ductility of steel piles ... 41
5.2.6 Fracture toughness of steel piles ... 42
5.3 Interlocks and connecting devices ... 42
5.4 Material properties for steel elements used for anchors and tension piles ... 43
5.4.1 General ... 43
5.4.2 Anchor tension elements ... 43
5.4.3 Ductility of anchors and tension piles ... 44
5.5 Material properties for steel members used for bracing ... 44

6 Durability ... 44
6.1 General ... 44
6.2 Durability requirements for piling ... 45
6.3 Durability requirements for anchors and tension piles ... 46
6.4 Corrosion rates for design ... 47
6.4.1 Corrosion rates for design in soil and water ... 47
6.4.2 Corrosion rates for design due to mechanical wearing ... 49
6.4.3 Corrosion due to stray currents ... 49
6.4.4 Corrosion rates for design in atmospheric environment ... 49

7 Structural analysis ... 49
7.1 Structural modelling ... 49
7.1.1 Modelling of the structure ... 49
7.1.2 Modelling of anchors, tension piles, walings, bracing and connections ... 50
7.2 Global analysis for ultimate limit state design checks ... 50
7.3 Imperfections ... 55
7.4 Methods of analysis considering material nonlinearities ... 56
7.5 Classification of cross-sections ... 57
7.5.1 Classification of U and Z ... 57
7.5.2 Classification of tubular piles ... 58
7.5.3 Classification of other cross-sections ... 59

8 Ultimate limit state ... 59
8.1 General ... 59
8.2 Partial factors ... 59
8.3 Sheet piling ... 60
8.3.1 Bending resistance of sheet piling considering shear lag ... 60
8.3.2 Shear resistance of sheet piling ... 63
8.3.3 Resistance of sheet piling for combined bending, shear and axial force ... 64
8.3.4 Buckling of sheet piling in bending and axial compression ... 66
8.3.5 Local effects of water pressure ... 69
8.3.6 Concentrated load introduction ... 69
8.4 Bearing piles ... 72
8.4.1 General ... 72
8.4.2 Design methods and design considerations ... 72
8.4.3 Buckling of bearing piles ... 73
8.4.4 Verification of steel piles filled with concrete ... 74
8.5 High modulus walls ... 74
8.6 Jagged walls ... 75
8.7 Combined walls ... 75
8.7.1 General ... 75
8.7.2 Secondary elements ... 75
8.7.3 Connectors ... 76
8.7.4 Primary elements ... 77
8.8 H-piles used as primary elements ... 78
8.8.1 General ... 78
8.8.2 H-piles in axial compression and bending ... 78
8.8.3 Lateral torsional buckling of H-piles ... 80
8.8.4 Shear buckling of H-piles ... 84

8.8.5 The combined effect of member forces and flange bending 84
8.9 Tubular sections used as primary elements 85
8.9.1 General 85
8.9.2 Tubular piles in bending and shear 86
8.9.3 Tubular piles in axial compression and bending 86
8.9.4 Buckling of tubular piles 87
8.9.5 Effects of transverse loads 87
8.9.6 The combined effect of member forces and circumferential bending 89
8.9.7 The effect of circumferential deformation on member resistance 90
8.9.8 Flexibility and ductility of the tubular piles 91
8.10 Straight web steel sheet piles 93
8.10.1 General 93
8.10.2 Verification of junction piles 93
8.11 Anchors and tension piles 95
8.11.1 General 95
8.11.2 Design resistance of tension elements for anchors 96
8.11.3 Anchors and tension piles subject to proof testing 98
8.12 Walings and bracings 99
8.13 Connections 99

9 Serviceability limit state 101
9.1 Basis 101
9.2 Displacements of retaining walls 101
9.3 Displacements of bearing piles 101
9.4 Structural aspects of steel sheet piling 102
9.5 Anchors and tension piles 102

Annex A (normative) Cold formed and Class 4 steel sheet piles 103

A.1 Use of this annex 103
A.2 Scope and field of application 103
A.3 General 103
A.3.1 Form of cold formed steel sheet piles 103
A.3.2 Terminology 104
A.4 Basis of design 104
A.4.1 Ultimate limit states 104
A.4.2 Serviceability limit states 104
A.5 Properties of materials and cross-sections 104
A.5.1 Material properties 104
A.5.2 Section properties 105
A.6 Local buckling 106
A.7 Resistance of cross-sections 108
A.7.1 General 108
A.7.2 Bending moment 109
A.7.3 Shear force 109
A.7.4 Local transverse forces 110
A.7.4.1 General 110
A.7.4.2 Webs subject to transverse compressive forces 110
A.7.4.3 Webs subject to transverse tensile forces 110
A.7.5 Combined shear force and bending moment 110
A.7.6 Combined bending moment and local transverse forces 111
A.7.7 Combined bending moment and axial force 111
A.7.8 Local transverse bending 111
A.8 Design by calculation 112

Annex B (normative) Testing of Class 4 steel sheet piles 113

B.1 Use of this annex 113
B.2 Scope and field of application 113
B.3 General 113
B.4 Tests on material 114
B.5 Cross-sectional data based on testing 114

B.6 Single span beam test 114
B.7 Intermediate support test 115
B.8 Double span beam test 116
B.9 Evaluation of test results 117
B.9.1 General 117
B.9.2 Adjustment of test results 117
B.9.3 Characteristic values 117
B.9.4 Design values 117

Annex C (normative) Conditions for use of plastic analysis and elasto-plastic verification for sheet pile walls 118

C.1 Use of this annex 118
C.2 Scope and field of application 118
C.3 Type of analysis 118
C.3.1 General 118
C.3.2 Use of nonlinear behaviour for verification of the bending moment 118
C.4 Flexural capacity of cross-sections 119
C.4.1 General 119
C.4.2 Determination of required rotation capacity 120

Annex D (normative) Design of Class 3 and 4 tubular piles loaded in longitudinal bending 124

D.1 Use of this annex 124
D.2 Scope and field of application 124
D.3 Section resistance 125
D.4 Buckling strength verification 125
D.5 Buckling parameters 126

Annex E (normative) Properties of semi-compact sections 128

E.1 Scope and field of application 128
E.2 Section properties 128

Annex F (informative) Typical grades of reinforcing and prestressing steels used for tension elements 129

F.1 Use of this annex 129
F.2 Scope and field of application 129

Bibliography 130
