ISO 13791:2004-11 (E)

Thermal performance of buildings - Calculation of internal temperatures of a room in summer without mechanical cooling - General criteria and validation procedures

Contents

Page

Foreword vi

Introduction vii

1 Scope 1

2 Normative references 1

3 Terms, definitions, symbols and units 1
3.1 Terms and definitions 1
3.2 Symbols and units 3
3.3 Subscripts 4

4 Determination of internal temperatures 4
4.1 Assumptions 4
4.2 Evaluation of the relevant temperatures 5
4.3 Room thermal balance 8
4.4 Boundary conditions 9
4.5 Terms in the thermal balance equations 13

5 Procedure for carrying out calculations 24
5.1 General 24
5.2 Design climatic data 24
5.3 Geometrical and thermophysical characteristics of room elements 25
5.4 Design internal gains 25
5.5 Design occupant behaviour 25
5.6 Calculation procedure 25

6 Report of the calculation 26

7 Validation procedures 26
7.1 Introduction 26
7.2 Validation of heat transfer processes 27
7.3 Validation procedure for the whole calculation method 34

Annex A (informative) Example of solution technique 46

A.1 Introduction 46
A.2 Basic assumptions for the calculation method 46
A.3 Calculation procedure 46
A.4 Room thermal balance 52

Annex B (informative) Convective heat transfer through ventilated air layer 53

B.1 Introduction 53
B.2 Convective heat transfer for a vertical air layer 53
B.3 Convective heat transfer for an external horizontal air layer 57

Annex C (informative) Shading due to overhangs and side fins 59

C.1 Introduction 59

C.2 Calculation path for overhang 60
C.3 Calculation path for vertical projection at the end of the overhang 61
C.4 Calculation path for side fin 62
C.5 Calculation of the sunlit area due to short side fin 63
C.6 External obstruction 63
C.7 Sunlit factor 65

Annex D (informative) Design climatic data in the warm season 66

Annex E (informative) Calculation of the internal long-wave radiation exchanges in buildings 67

E.1 Introduction 67
E.2 Limits of application 67
E.3 Calculation procedure 67

Annex F (informative) External radiative long-wave heat transfer coefficients 68

F.1 Introduction 68
F.2 Terms and calculation procedure 68

Annex G (informative) Solar factors 70

G.1 Introduction 70
G.2 Solar to air factor 70
G.3 Distribution factors 70
G.4 Solar loss factor 71

Annex H (informative) Internal gains 72

H.1 Introduction 72
H.2 Residential building 72
H.3 Non residential building 73

Annex J (informative) Air ventilation 75

J.1 Introduction 75
J.2 Calculation procedure 75
J.3 Example of calculation of natural ventilation rates for simple building 80

Annex K (informative) Detailed results of the validation tests considered in the "whole validation model" procedure 82

Bibliography 84
