Methods for sampling and analysis of fire effluents

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Methods of sampling	1
2.1	General considerations	1
2.2	Special considerations	1
2.3	Sampling using gas-solution absorbers	3
2.4	Sampling using solid sorption tubes	4
2.5	Sampling for spectrometric or spectrophotometric analysis	5
2.6	Sampling using gas bags	6
3	Analytical methods for "narcotic" (asphyxiant) gases	7
3.1	Carbon monoxide by non-dispersive infra-red spectroscopy (NDIR)	7
3.2	Carbon dioxide by non dispersive infra-red spectroscopy (NDIR)	8
3.3	Oxygen by paramagnetism	9
3.4	Hydrogen cyanide	10
4	Analytical methods for "irritant" gases and vapours	17
4.1	Hydrogen chloride and hydrogen bromide	17
4.2	Hydrogen fluoride	21
4.3	Oxides of nitrogen	27
4.4	Acrolein	30
4.5	Formaldehyde	34
4.6	Total aldehydes by colorimetry	38
4.7	Sulfur dioxide by high performance ion chromatography (HPIC)	40
4.8	Ammonia	42
4.9	Antimony compounds by atomic absorption spectrophotometry (AAS) or inductively coupled plasma emission spectrometry (ICP)	45
4.10	Arsenic compounds by atomic absorption spectrophotometry (AAS) or inductively coupled plasma emission spectrometry (ICP)	47
4.11	Phosphorus by inductively coupled plasma emission spectrometry (ICP)	48
4.12	Phosphates	49
5	Analytical methods for particulates	53
5.1	General considerations	53
5.2	Particle concentrations/gravimetric determination	53
5.3	Particle size distribution	54
Annex A (informative) Other compounds of interest		55
Annex B (informative) Colour-change chemical detection tubes		57
Annex C (informative) Quantitative instrumental methods		58
Bibliography		76
