DIN EN 13384-1:2006-03 (E)

Chimneys - Thermal and fluid dynamic calculation methods - Part 1: Chimneys serving one appliance

Contents

Page

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Symbols, terminology and units 8

5 Calculation method for non-balanced flue chimneys 11
5.1 General principles 11
5.2 Pressure requirements 11
5.3 Temperature requirement 12
5.4 Calculation procedure 13
5.5 Flue gas data characterising the heating appliance 13
5.6 Characteristic data for the calculation 16
5.7 Basic values for the calculation 16
5.8 Determination of the temperatures 20
5.9 Determination of the density of the flue gas and the velocity of the flue gas 23
5.10 Determination of the pressures 24
5.11 Draught required at the flue gas inlet into the chimney (PZe) and maximum differential pressure at the flue gas inlet into the chimney (PZoe) 27
5.12 Calculation of the inner wall temperature at the chimney outlet (Tiob) 31

6 Secondary air for negative pressure chimneys 32
6.1 General 32
6.2 Calculation method 32
6.3 Basic values for the calculation of secondary air 33
6.4 Pressures 34
6.5 Temperature requirement with secondary air 37

7 Calculation method for balanced flue chimneys 37
7.1 General principles 37
7.2 Pressure requirements 38
7.3 Temperature requirements 38
7.4 Calculation procedure 38
7.5 Flue gas data characterizing the heating appliance 39
7.6 Characteristic data for the calculation 39
7.7 Basic values for the calculation 39
7.8 Determination of the temperatures 40
7.9 Determination of densities and velocities 60
7.10 Determination of pressures 61
7.11 Draught required at the flue gas inlet into the chimney (PZe) and maximum differential pressure at the flue gas inlet into the chimney (PZoe) 62
7.12 Calculation of the inner wall temperature at the chimney outlet (Tiob) 65

8 Consideration of the condensation heat of the flue gas water vapour 66
8.1 General 66
8.2 Onset of condensation 66
8.3 Calculation of the flue gas temperature at the outlet of a chimney segment with condensation (j NsegK) 69

Annex A (informative) Calculation of thermal resistance 75

Annex B (informative) Tables 76

Annex C (informative) Chimney outlet with regard to adjacent buildings 92

Annex D (informative) Limit curves of the classification for the draught regulator 93

Annex E (informative) Determination of the gas constant R considering the condensation 94
