

DIN EN 1999-1-1:2010-05 (E)

Eurocode 9: Design of aluminium structures - Part 1-1: General structural rules (includes Amendment A1:2009)

Content	Page
Foreword	7
A1) Foreword to EN 1999-1-1:2007/A1:2009	7
National annex for EN 1999-1-1	10
1 General	11
1.1 Scope	11
1.1.1 Scope of EN 1999	11
1.1.2 Scope of EN 1999-1-1	11
1.2 Normative references	12
1.2.1 General references	12
1.2.2 References on structural design	13
1.2.3 References on aluminium alloys	13
1.2.4 References on welding	15
1.2.5 Other references	15
1.3 Assumptions	15
1.4 Distinction between principles and application rules	15
1.5 Terms and definitions	15
1.6 Symbols	16
1.7 Conventions for member axes	27
1.8 Specification for execution of the work	27
2 Basis of design	29
2.1 Requirements	29
2.1.1 Basic requirements	29
2.1.2 Reliability management	29
2.1.3 Design working life, durability and robustness	29
2.2 Principles of limit state design	29
2.3 Basic variables	30
2.3.1 Actions and environmental influences	30
2.3.2 Material and product properties	30
2.4 Verification by the partial factor method	30
2.4.1 Design value of material properties	30
2.4.2 Design value of geometrical data	30
2.4.3 Design resistances	30
2.4.4 Verification of static equilibrium (EQU)	31
2.5 Design assisted by testing	31
3 Materials	32
3.1 General	32
3.2 Structural aluminium	32
3.2.1 Range of materials	32
3.2.2 Material properties for wrought aluminium alloys	33
3.2.3 Material properties for cast aluminium alloys	37
3.2.4 Dimensions, mass and tolerances	38
3.2.5 Design values of material constants	38
3.3 Connecting devices	38
3.3.1 General	38
3.3.2 Bolts, nuts and washers	39
3.3.3 Rivets	41
3.3.4 Welding consumables	41
3.3.5 Adhesives	43

4 Durability	43
5 Structural analysis.....	44
5.1 Structural modelling for analysis.....	44
5.1.1 Structural modelling and basic assumptions	44
5.1.2 Joint modelling.....	44
5.1.3 Ground-structure interaction	44
5.2 Global analysis	44
5.2.1 Effects of deformed geometry of the structure.....	44
5.2.2 Structural stability of frames	45
5.3 Imperfections.....	46
5.3.1 Basis	46
5.3.2 Imperfections for global analysis of frames	46
5.3.3 Imperfection for analysis of bracing systems	51
5.3.4 Member imperfections	53
5.4 Methods of analysis.....	53
5.4.1 General	53
5.4.2 Elastic global analysis	53
5.4.3 Plastic global analysis	53
6 Ultimate limit states for members.....	54
6.1 Basis	54
6.1.1 General	54
6.1.2 Characteristic value of strength.....	54
6.1.3 Partial safety factors	54
6.1.4 Classification of cross-sections	54
6.1.5 Local buckling resistance	60
6.1.6 HAZ softening adjacent to welds	61
6.2 Resistance of cross-sections	64
6.2.1 General	64
6.2.2 Section properties	64
6.2.3 Tension	66
6.2.4 Compression.....	66
6.2.5 Bending moment	67
6.2.6 Shear.....	69
6.2.7 Torsion.....	70
6.2.8 Bending and shear	71
6.2.9 Bending and axial force.....	72
6.2.10 Bending, shear and axial force	73
6.2.11 Web bearing	74
6.3 Buckling resistance of members.....	74
6.3.1 Members in compression.....	74
6.3.2 Members in bending	78
6.3.3 Members in bending and axial compression	80
6.4 Uniform built-up members	84
6.4.1 General	84
6.4.2 Laced compression members	86
6.4.3 Battened compression members	88
6.4.4 Closely spaced built-up members.....	89
6.5 Un-stiffened plates under in-plane loading	90
6.5.1 General	90
6.5.2 Resistance under uniform compression.....	90
6.5.3 Resistance under in-plane moment.....	91
6.5.4 Resistance under transverse or longitudinal stress gradient	92
6.5.5 Resistance under shear	92
6.5.6 Resistance under combined action	93
6.6 Stiffened plates under in-plane loading	94
6.6.1 General	94

6.6.2	Stiffened plates under uniform compression	95
6.6.3	Stiffened plates under in-plane moment	97
6.6.4	Longitudinal stress gradient on multi-stiffened plates.....	98
6.6.5	Multi-stiffened plating in shear	98
6.6.6	Buckling load for orthotropic plates	98
6.7	Plate girders	101
6.7.1	General.....	101
6.7.2	Resistance of girders under in-plane bending.....	101
6.7.3	Resistance of girders with longitudinal web stiffeners	102
6.7.4	Resistance to shear.....	104
6.7.5	Resistance to transverse loads	108
6.7.6	Interaction	111
6.7.7	Flange induced buckling.....	112
6.7.8	Web stiffeners.....	113
6.8	Members with corrugated webs	114
6.8.1	Bending moment resistance	114
6.8.2	Shear force resistance	115
7	Serviceability Limit States	117
7.1	General.....	117
7.2	Serviceability limit states for buildings	117
7.2.1	Vertical deflections.....	117
7.2.2	Horizontal deflections.....	117
7.2.3	Dynamic effects	117
7.2.4	Calculation of elastic deflection	117
8	Design of joints.....	119
8.1	Basis of design.....	119
8.1.1	Introduction	119
8.1.2	Applied forces and moments	119
8.1.3	Resistance of joints	119
8.1.4	Design assumptions	120
8.1.5	Fabrication and execution	120
8.2	Intersections for bolted, riveted and welded joints	120
8.3	Joints loaded in shear subject to impact, vibration and/or load reversal	121
8.4	Classification of joints	121
8.5	Connections made with bolts, rivets and pins	121
8.5.1	Positioning of holes for bolts and rivets	121
8.5.2	Deductions for fastener holes	124
8.5.3	Categories of bolted connections	126
8.5.4	Distribution of forces between fasteners	127
8.5.5	Design resistances of bolts.....	128
8.5.6	Design resistance of rivets	130
8.5.7	Countersunk bolts and rivets	131
8.5.8	Hollow rivets and rivets with mandrel.....	131
8.5.9	High strength bolts in slip-resistant connections	131
8.5.10	Prying forces	133
8.5.11	Long joints	134
8.5.12	Single lap joints with fasteners in one row	134
8.5.13	Fasteners through packings.....	134
8.5.14	Pin connections	135
8.6	Welded connections	138
8.6.1	General.....	138
8.6.2	Heat-affected zone (HAZ)	138
8.6.3	Design of welded connections	138
8.7	Hybrid connections	146

8.8	Adhesive bonded connections	146
8.9	Other joining methods	146
A	Annex A [informative] – Reliability differentiation	147
A.1	Introduction	147
A.2	Design provisions for reliability differentiation - Design supervision levels.....	147
A.3	Execution provisions for reliability differentiation – Execution classes	147
A.4	Governing factors for choice of execution class	147
A.5	Determination of execution class	148
A.6	Utilization grades	148
B	Annex B [normative] - Equivalent T-stub in tension	150
B.1	General rules for evaluation of resistance.....	150
B.2	Individual bolt-row, bolt-groups and groups of bolt-rows.....	154
C	Annex C [informative] - Materials selection	156
C.1	General	156
C.2	Wrought products	156
C.2.1	Wrought heat treatable alloys.....	156
C.2.2	Wrought non-heat treatable alloys.....	159
C.3	Cast products	160
C.3.1	General	160
C.3.2	Heat treatable casting alloys EN AC-42100, EN AC-42200, EN AC-43000 and EN AC-43300	160
C.3.3	Non-heat treatable casting alloys EN AC-44200 and EN AC-51300.....	160
C.3.4	Special design rules for castings.....	160
C.4	Connecting devices.....	162
C.4.1	Aluminium bolts.....	162
C.4.2	Aluminium rivets.....	162
D	Annex D [informative] – Corrosion and surface protection.....	163
D.1	Corrosion of aluminium under various exposure conditions.....	163
D.2	Durability ratings of aluminium alloys.....	163
D.3	Corrosion protection	164
D.3.1	General	164
D.3.2	Overall corrosion protection of structural aluminium	164
D.3.3	Aluminium in contact with aluminium and other metals	165
D.3.4	Aluminium surfaces in contact with non-metallic materials	165
E	Annex E [informative] - Analytical models for stress strain relationship.....	170
E.1	Scope	170
E.2	Analytical models.....	170
E.2.1	Piecewise linear models	170
E.2.2	Continuous models	172
E.3	Approximate evaluation of ε_u	176
F	Annex F [informative] - Behaviour of cross-sections beyond the elastic limit.....	177
F.1	General	177
F.2	Definition of cross-section limit states	177
F.3	Classification of cross-sections according to limit states	177
F.4	Evaluation of ultimate axial load.....	178
F.5	Evaluation of ultimate bending moment	179
G	Annex G [informative] - Rotation capacity.....	181
H	Annex H [informative] - Plastic hinge method for continuous beams.....	183

Annex I [informative] - Lateral torsional buckling of beams and torsional or torsional-flexural buckling of compressed members	186
I.1 Elastic critical moment and slenderness	186
I.1.1 Basis.....	186
I.1.2 General formula for beams with uniform cross-sections symmetrical about the minor or major axis 186	
I.1.3 Beams with uniform cross-sections symmetrical about major axis, centrally symmetric and doubly symmetric cross-sections	191
I.1.4 Cantilevers with uniform cross-sections symmetrical about the minor axis	192
I.2 Slenderness for lateral torsional buckling.....	194
I.3 Elastic critical axial force for torsional and torsional-flexural buckling	196
I.4 Slenderness for torsional and torsional-flexural buckling	197
Annex J [informative] - Properties of cross sections	202
J.1 Torsion constant I_t	202
J.2 Position of shear centre S	202
J.3 Warping constant I_w	202
J.4 Cross section constants for open thin-walled cross sections	206
J.5 Cross section constants for open cross section with branches.....	208
J.6 Torsion constant and shear A_t centre A_1 of cross section with closed part	208
Annex K [informative] - Shear lag effects in member design.....	210
K.1 General.....	210
K.2 Effective width for elastic shear lag	210
K.2.1 Effective width factor for shear lag	210
K.2.2 Stress distribution for shear lag	211
K.2.3 In-plane load effects	212
K.3 Shear lag at ultimate limit states.....	213
Annex L [informative] - Classification of joints.....	214
L.1 General.....	214
L.2 Fully restoring connections.....	215
L.3 Partially restoring connections	215
L.4 Classification according to rigidity.....	215
L.5 Classification according to strength.....	216
L.6 Classification according to ductility	216
L.7 General design requirements for connections.....	216
L.8 Requirements for framing connections.....	216
L.8.1 General.....	216
L.8.2 Nominally pinned connections	217
L.8.3 Built-in connections.....	218
Annex M [informative] - Adhesive bonded connections	219
M.1 General	219
M.2 Adhesives	219
M.3 Design of adhesive bonded joints	220
M.3.1 General	220
M.3.2 Characteristic strength of adhesives	221
M.3.3 Design shear stress	221
M.4 Tests	221
[A] Bibliography.....	222
