

DIN EN 10245-3:2012-01 (E)

Steel wire and wire products - Organic coatings on steel wire - Part 3: PE coated wire

Contents		Page
Foreword		3
Introduction		4
1	Scope	4
2	Normative references	5
3	Terms and definitions	5
4	Types of PE coating materials	5
5	Requirements and test methods for PE coating material	6
5.1	Requirements	6
5.1.1	The composition and method of application	6
5.1.2	PE organic coating material consistency	6
5.1.3	Density	6
5.1.4	Melt flow index	6
5.1.5	Tensile strength	6
5.1.6	Elongation	7
5.2	Test methods	7
5.2.1	General	7
5.2.2	Melt flow index	7
6	Requirements and test methods for PE coating on wire	7
6.1	Requirements	7
6.1.1	General	7
6.1.2	Appearance	7
6.1.3	Colour-gloss and thickness	7
6.1.4	Elongation	7
6.1.5	Concentricity	8
6.1.6	Adherence	8
6.2	Test method	8
6.2.1	Appearance	8
6.2.2	Colour	8
6.2.3	Gloss	8
6.2.4	Thickness	8
6.2.5	Concentricity	8
6.2.6	Tensile strength and elongation	8
6.2.7	Adherence (where required)	8
6.2.8	Resistance to artificial light exposure	8
7	Performance of PE coating materials as the coating on wire	8
7.1	Requirement for colour stability (accelerated weathering)	8
7.2	Test method for colour stability	9
8	Retests	9
9	Inspection and quality assurance	9
