

DIN EN 10245-3:2012-01 (E)

Steel wire and wire products - Organic coatings on steel wire - Part 3: PE coated wire

Contents	Page
Foreword	3
Introduction	4
1 Scope	4
2 Normative references	5
3 Terms and definitions	5
4 Types of PE coating materials	5
5 Requirements and test methods for PE coating material	6
5.1 Requirements	6
5.1.1 The composition and method of application	6
5.1.2 PE organic coating material consistency	6
5.1.3 Density	6
5.1.4 Melt flow index	6
5.1.5 Tensile strength	6
5.1.6 Elongation	7
5.2 Test methods	7
5.2.1 General	7
5.2.2 Melt flow index	7
6 Requirements and test methods for PE coating on wire	7
6.1 Requirements	7
6.1.1 General	7
6.1.2 Appearance	7
6.1.3 Colour-gloss and thickness	7
6.1.4 Elongation	7
6.1.5 Concentricity	8
6.1.6 Adherence	8
6.2 Test method	8
6.2.1 Appearance	8
6.2.2 Colour	8
6.2.3 Gloss	8
6.2.4 Thickness	8
6.2.5 Concentricity	8
6.2.6 Tensile strength and elongation	8
6.2.7 Adherence (where required)	8
6.2.8 Resistance to artificial light exposure	8
7 Performance of PE coating materials as the coating on wire	8
7.1 Requirement for colour stability (accelerated weathering)	8
7.2 Test method for colour stability	9
8 Retests	9
9 Inspection and quality assurance	9
