7.9 Linear thermal expansion 19

8 Test methods 19
8.1 Information, instructions and marking 19
8.2 Chemical composition 20
8.3 Mechanical testing 20
8.3.1 Apparatus 20
8.3.2 Test procedure 20
8.4 Proof stress of 0,2 % non-proportional extension 21
8.4.1 Calculation 21
8.4.2 Mean value 21
8.5 Percentage elongation after fracture 21
8.5.1 Calculation 21
8.5.2 Mean value 21
8.6 Elastic modulus measurement 21
8.6.1 Tensile strain method 21
8.6.2 Flexure method in three- or four-point bending mode 22
8.6.3 Acoustic resonance method 24
8.7 Calculation of elasticity parameters from acoustic measurement 25
8.7.1 General 25
8.7.2 Elastic modulus 26
8.7.3 Shear modulus 26
8.7.4 Poisson ratio 27
8.8 Density 27
8.8.1 Preparation of test specimens 27
8.8.2 Reagents 27
8.8.3 Apparatus 27
8.8.4 Procedure 27
8.9 Corrosion resistance by the static immersion procedure of ISO 10271:2011 27
8.9.1 Preparation of test specimens 27
8.9.2 Reagents 27
8.9.3 Apparatus 27
8.9.4 Test solution 28
8.9.5 Test procedure 28
8.9.6 Analysis 28
8.9.7 Treatment of data 28
8.10 Sulfide tarnish test (cyclic immersion) 28
8.11 Sulfide tarnish test (static immersion) 28
8.12 Solidus and liquidus temperatures (dental casting alloys) or melting point (commercially pure metals) 28
8.12.1 Cooling curve method 28
8.12.2 Thermal analysis method 29
8.13 Linear thermal expansion 30

9 Information and instructions for use 30
9.1 Information 30
9.2 Processing instructions 31

10 Marking and labelling 31

10.1 Marking 31
10.2 Labelling of the package 31

Annex A (informative) Tensile testing of a non-cast Type 0 metallic material that is intended for use in a thickness between 0,1 mm and 0,5 mm 33

Annex B (normative) Calculation of uncertainty for elasticity measurement 36

Annex C (informative) Measurement of Poisson ratio 40

Bibliography 42

7.7 Corrosion resistance 19
7.8 Tarnish resistance and colour 19
