Foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Classification 7

5 Requirements 7
5.1 Chemical composition 7
5.2 Hazardous elements 8
5.3 Biocompatibility 8
5.4 Mechanical properties 8
5.5 Density 11
5.6 Corrosion resistance for material integrity 11
5.7 Tarnish resistance 12
5.8 Solidus and liquidus temperatures (for alloy) or melting point (for commercially pure metal) 12
5.9 Thermal expansion coefficient 12
5.10 Information, instructions and marking 12

6 Sampling 12

7 Preparation of test specimens 13
7.1 General 13
7.2 Heat-treatment 13
7.3 Specimens 13

8 Test methods 15
8.1 Information, instructions and marking 15
8.2 Chemical composition 15
8.3 Mechanical properties 16
8.4 Density 17
8.5 Corrosion resistance 18
8.6 Tarnish resistance (sodium sulfide test) 19
8.7 Solidus and liquidus temperatures (alloys) or melting point (commercially pure metals) 20
8.8 Linear thermal expansion 20

9 Information and instructions for use 20
9.1 Information 20
9.2 Processing instructions 21

10 Marking and labelling 21
10.1 Marking 21
10.2 Labelling on the package 22

Annex A (informative) Tensile testing of a non-cast Type 0 metallic material that is intended for use in a thickness between 0,1 mm and 0,5 mm 23

Bibliography 26
