ISO/TS 9241-126:2019-12 (E)

Ergonomics of human-sy stem interaction - Part 126: Guidance on the presentation of auditory informatio n

Contents

Page

Foreword vi

Introduction vii

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Application 3
4.1 Accessibility 3
4.2 Applying the recommendations in this document 4

5 Appropriate usage 4
5.1 Visual system unavailability 4
5.2 Inadequate or excessive light 4
5.3 Inability to maintain visual attention 4
5.4 Message brevity and simplicity 4
5.5 Event-based messages 5
5.6 Messages requiring immediate action 5
5.7 Messages requiring verbal response 5
5.8 Permanence of message relevance 5
5.9 Attention capture 5
5.10 Muting sound 5

6 Auditory presentation 5
6.1 General 5
6.1.1 Auditory channel overload 5
6.1.2 Information conciseness 5
6.1.3 Avoid extreme dimensions 5
6.1.4 Monaural option 6
6.1.5 Ease of learning 6
6.1.6 Signal invariance 6
6.1.7 Signal similarity 6
6.1.8 Two-stage signal usage 6
6.1.9 Logical sequencing 6
6.1.10 Supporting short term memory 6
6.1.11 Cross-cultural sounds 7
6.1.12 Representative sounds 7
6.1.13 Representative sound usage 7
6.2 Detectability in noisy environments 7
6.2.1 Signal distinctiveness 7
6.2.2 Change signal frequency 7
6.2.3 Signal duration in noisy environments 7

7 Auditory dimensions 7
7.1 Frequency 7
7.1.1 Absolute pitch identification 7
7.1.2 Temporal proximity for pitch comparison 7
7.1.3 Similarity for pitch comparison 7

7.1.4 Minimum difference for pitch comparison 8
7.1.5 Frequency range for pitch identification 8
7.1.6 Frequency range for most accurate pitch discrimination 8
7.1.7 Harmonicity for pitch identification 8
7.1.8 Harmonic tones for pitch discrimination tasks 8
7.1.9 Long-distance sound 8
7.1.10 Obstructed sound 8
7.2 Intensity 8
7.2.1 Avoid distortion 8

7.2.2 Separate signal control 8
7.2.3 Loudness cues about the environment 9
7.2.4 Minimal signal intensity 9
7.2.5 Signal intensity for rapid response 9
7.2.6 Relative maximal signal intensity 9
7.2.7 Absolute maximal signal loudness 9
7.3 Timbre 9
7.3.1 Timbre discrimination 9
7.3.2 Musical instrument timbres 9
7.4 Localization 9
7.4.1 Guidance related to lateral sound localization 9
7.4.2 Minimum angle for position discrimination 10
7.4.3 Frequency selection for sound localization 10
7.4.4 Minimum distance for front/back position identification 10
7.4.5 Guidance related to distance judgment 10
7.4.6 Doppler effect 10
7.4.7 Guidance related to elevation angle judgment 10
7.5 Duration 11
7.5.1 Minimum signal duration 11
7.5.2 Adjustable signal duration 11
7.6 Rhythm and accent usage 11
7.7 Timing 11
7.7.1 Event-based sounds 11
7.7.2 Sounds to guide rhythmic movements 11
7.7.3 Concurrent auditory streams 11

8 Speech 11
8.1 Appropriate usage 11
8.1.1 Complex messages 11
8.1.2 Source identification 11
8.1.3 Untrained users 12
8.1.4 Stressful context of use 12
8.1.5 Rapid information exchange 12
8.2 General speech presentation 12
8.2.1 Eliminate non-relevant speech 12
8.2.2 Audio volume consistency 12
8.2.3 Monophonic speech presentation 12
8.2.4 Present messages serially 12
8.2.5 Information brevity 12
8.2.6 Message replay 12
8.2.7 Option phrase sequencing 12
8.2.8 Grouping information 13
8.3 Language 13
8.3.1 Language and dialect control 13
8.3.2 Avoid dialect-specific expressions 13
8.3.3 Vocabulary used in prompts 13
8.3.4 Consistency of terminology use 13
8.3.5 Unambiguous prompts 13
8.3.6 Simple linguistic forms 13
8.3.7 Minimum syllable count 13
8.3.8 Sentence usage 13
8.4 Voice 13

8.4.1 Use of synthetic speech 13
8.4.2 Source voice identification 14
8.4.3 Dialects and accents 14
8.4.4 Speech output rate 14
8.4.5 Intonation and prosody 14

9 Earcons 14
9.1 Meaningful earcons 14
9.2 Sound organization 14
9.3 Earcon usage 14
9.4 Earcon construction 14
9.5 Earcon duration 15
9.6 Consistency across earcons 15
9.7 Reversing earcons 15

10 Coding 15
10.1 General 15
10.1.1 Meaningfulness of codes 15
10.1.2 Access to meaning of code 15
10.1.3 Rules of code construction 15
10.1.4 Distinctiveness of codes 15
10.1.5 Consistent coding 15
10.1.6 Coding relative values 15
10.1.7 Ordered coding 16
10.1.8 Change of state 16
10.1.9 Combination codes 16
10.1.10 User training in codes 16
10.1.11 Counting simultaneous tones 16
10.2 Dimension-specific coding 16
10.2.1 Number of frequencies for pitch coding 16
10.2.2 Frequency selection for pitch coding 16
10.2.3 Need for redundant coding when coding based on frequency 16
10.2.4 Coding based on timbre 17
10.2.5 Coding based on intensity 17
10.2.6 Number of levels for loudness coding 17
10.2.7 Intensity spacing for loudness coding 17
10.2.8 Number of levels for pitch and loudness coding 17
10.2.9 Coding by position and distance 17
10.2.10 Coding position and distance with rhythm 17
10.2.11 Number of levels for duration coding 17
