ISO/TS 9241-430:2021-12 (E)

Ergonomics of human-system interaction - Part 430: Recommendations for the design of non-touch gestural input for the reduction of biomechanical stress

Contents

Page

Foreword ... **iv**

Introduction ... **v**

1 Scope ... **1**

2 Normative references ... **1**

3 Terms and definitions ... **2**

4 Selection of non-contacting gestures ... **3**
- 4.1 Overall approach to the selection of non-contacting gestures ... 3
- 4.2 Large shoulder and elbow movements ... 3
- 4.3 Optimal hand location relative to body ... 3
- 4.4 Wrist and forearm posture ... 3
- 4.5 Comfort of hand postures and motions ... 3
  - 4.5.1 Fist, neutral and extended fingers ... 3
  - 4.5.2 Asynchronous adjacent finger postures ... 4
  - 4.5.3 Thumb flexion or extension and abduction or adduction ... 4
  - 4.5.4 Speed of finger or hand movements and impact ... 4
  - 4.5.5 Hand microgestures ... 5

5 Evaluation of non-contacting gestures ... **5**
- 5.1 General ... 5
- 5.2 Laboratory-based study design ... 5
- 5.3 Subjects for studies ... 5
- 5.4 Independent variables ... 5
- 5.5 Example technologies for gesture capture ... 6
- 5.6 Dependent variables (outcome measures) ... 6
- 5.7 Examples of tasks ... 7
- 5.8 Target size ... 8
- 5.9 Data analysis, interpretation and reporting ... 9

Annex A (informative) **Example of questionnaire for assessing subjective usability measures** ... **10**

Bibliography ... **11**
