ISO/TR 9241-610:2022-10 (E)

Ergonomics of human-system interaction - Part 610: Impact of light and lighting on users of interactive systems

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Light and lighting -- more than just vision 4
4.1 How radiation impacts the human body 4
4.2 The role of light for life 5
4.3 Non-visual effects of radiation 6
4.4 A new definition of lighting 9
4.5 Why light is not light and daylight in interiors is different from solar light 9
4.6 The role of daylight and solar radiation 11

5 Light and circarhythms 11
5.1 Basics 11
5.2 Importance of light for the circadian rhythm 12
5.3 A new perspective on light 14
5.4 Relation to other zeitgebers 16

6 Light at night (LAN) 17
6.1 General 17
6.2 Studies of light at night (LAN or ALAN) 18

7 Light history (memory effect) 19

8 Physical characteristics 21
8.1 Spatial distribution of the source 21
8.2 Location of the source 21
8.3 Light spectrum and its role for vision 22
8.4 Light spectrum and its role for non-visual effects 23
8.5 Time and timing 24
8.6 Intensity 24
8.7 The role of visual displays 24

9 Individual differences 26
9.1 Chronotype 26
9.2 Age dependency 26
9.3 Internal circadian time (body time) 27

10 Conclusions 28
10.1 Agreed facts 28
10.2 Controversial issues 28

Annex A (informative)Someusefulbehavioursofusersorbeneficialconditionsforthe physical environment 30
