

DIN EN ISO 8996:2005-01 (E)

Ergonomics of the thermal environment - Determination of metabolic rate (ISO 8996:2004)

Contents		Page
Foreword		2
1	Scope.....	3
2	Normative references	3
3	Principle and accuracy	3
4	Level 1, screening	5
4.1	Table for the estimation of metabolic rate by occupation	5
4.2	Classification of metabolic rate by categories	5
5	Level 2, observation.....	5
5.1	Estimation of metabolic rate by task requirements	5
5.2	Metabolic rate for typical activities	6
5.3	Metabolic rate for a work cycle.....	6
5.4	Influence of the length of rest periods and work periods.....	7
5.5	Obtaining values by interpolation	8
5.6	Requirements for the application of metabolic-rate tables	8
6	Level 3, analysis	8
6.1	Estimation of metabolic rate using heart rate.....	8
6.2	Relationship between heart rate and metabolic rate.....	9
7	Level 4, expertise	10
7.1	Determination of metabolic rate by measurement of oxygen consumption rate.....	10
7.2	The doubly labelled water method for long-term measurements	16
7.3	Direct calorimetry — Principle.....	16
Annex A (informative)	Evaluation of the metabolic rate at level 1, screening	17
Annex B (informative)	Evaluation of the metabolic rate at level 2, observation	19
Annex C (informative)	Evaluation of the metabolic rate at level 3, analysis	22
Annex D (informative)	Evaluation of the metabolic rate at level 4, expertise — Examples of the calculation of metabolic rate based on measured data	23
