Optics and optical instruments - Test methods for telescopic systems - Part 8: Test methods for night-vision devices

Contents		Page
Foreword		v
1	Scope	1
2	Normative references	1
3	General requirements for the test conditions and preparation of tests	1
4	Test method for measuring magnification and difference in magnification	2
4.1	General	2
4.2	Requirements for the test arrangements and their principal parts	3
4.3	Sequence of measurements	5
4.4	Assessment of results	5
5	Test method for measuring night-vision device gain	6
5.1	General	6
5.2	Requirements for the test arrangement and principal parts	6
5.3	Sequence of measurements	7
5.4	Assessment of results	7
6	Test method for measuring the angular field of view in object space	7
6.1	General	7
6.2	Requirements for the test arrangement and principal parts	7
6.3	Sequence of measurements	8
6.4	Assessment of results	8
7	Test method for measuring exit pupil diameter and eye relief	9
7.1	General	9
7.2	Requirements for the test arrangement and its principal parts	9
7.3	Sequence of measurements	10
8	Test method for measuring the error of zero-position of the dioptre scale	10
8.1	General	10
8.2	Requirements for the test arrangement and its principal parts	10
8.3	Sequence of measurements	11
8.4	Assessment of results	11
9	Test method for measuring the angle of image rotation around the optical axis relative to the object and the difference of image rotation angles	12
9.1	General	12
9.2	Requirements of the test arrangement and its principal parts	12
9.3	Sequence of measurements	13
9.4	Assessment of results	13
10	Test method for measuring non-parallelism of the axes of bundles of rays emerging from the eyepieces of the night-vision device	13
10.1	General	13
10.2	Requirements of the test arrangement and its principal parts	13
10.3	Sequence of measurements	15
10.4	Assessment of results	15

11	Test method for measuring the limit of resolution	15
11.1	General	15
11.2	Requirements for the test arrangement and its principal parts	15
11.3	Sequence of measurements	16
11.4	Assessment of results	16
12	Test method for measuring working resolution and for determining range of vision	16
12.1	General	16
12.2	Requirements for the test arrangement and its principal parts	17
12.3	Sequence of measurements	17
12.4	Assessment of results	18
13	Test method for measuring the close distance of observation	19
13.1	General	19
13.2	Requirements for the test arrangement and its principal parts	19
13.3	Sequence of measurements	20
13.4	Assessment of results	20
14	Test method for imperfections in the field of view	20
14.1	General	20
14.2	Requirements for the test arrangement and its principal parts	20
14.3	Sequence of measurements	21
14.4	Assessment of results	22
15	Test method for measuring the continuous work time of a night-vision device	22
15.1	General	22
15.2	Requirements for the test arrangement and its principal parts	22
15.3	Sequence of measurements	22
15.4	Assessment of results	22
