ISO 14997:2017-08 (E)

Optics and photonics - Test methods for surface imperfections of optical elements

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Symbols 2

5 Inspection methods and levels 2

6 General information regarding visual inspection 3

7 Evaluationmethodsforthevisibilitybasedspecificationofsurfaceimperfections 3
7.1 Visual evaluation (IVV) 3
7.1.1 General 3
7.1.2 Typical visual evaluation method 3
7.2 Visibility comparison inspection (ISV) 4
7.2.1 General 4
7.2.2 Typical transmitted light visibility comparison method 4
7.2.3 Alternative transmitted light visibility comparison method 4
7.2.4 Reflective light visibility comparison method 5

8 Evaluationmethodsforthedimensionalbasedspecificationofsurfaceimperfections 5
8.1 Visual evaluation (IVD) 5
8.1.1 General 5
8.1.2 Typical visual evaluation method 5
8.2 Dimensional comparison inspection (ISD) 5
8.2.1 General 5
8.2.2 Typical dimensional comparison inspection method 6
8.3 Dimensional comparison inspection with magnification (IMD) 6
8.3.1 General 6
8.3.2 Typical stereo microscope evaluation method 6

9 Test report 7

Annex A (normative) Visual inspection equipment 9

Annex B (informative) Recommended dimensions of artefacts on a dimensional comparison standard 12

Annex C (informative) Number of allowed smaller imperfections with equivalent area of thespecifiedgrade 13
