DIN EN ISO 24157:2020-06 (E)

Ophthalmic optics and instruments - Reporting aberrations of the human eye (ISO 24157:2008 + Amd 1:2020)

Contents

Page

Foreword ... 4
European foreword to Amendment A1 ... 5
Foreword to Amendment 1 ... 6
1 Scope ... 7
2 Normative references ... 7
3 Terms and definitions ... 7
4 Coordinate system ... 11
5 Representation of wavefront data ... 12
5.1 Representation of wavefront data with the use of Zernike polynomial function coefficients ... 12
5.1.1 Symbols for Zernike polynomial functions ... 12
5.1.2 Radial index ... 12
5.1.3 Meridional index ... 12
5.1.4 Radial parameter ... 12
5.1.5 Meridional parameter ... 12
5.1.6 Coefficients ... 13
5.1.7 Common names of Zernike polynomial functions ... 13
5.1.8 Comparison of data expressed as Zernike coefficients generated using different aperture sizes ... 14
5.1.9 Representation of wavefront error data expressed as Zernike coefficients presented in magnitude/axis form ... 14
5.1.10 Common names of Zernike polynomial functions – magnitude/axis form ... 15
5.2 Representation of wavefront data in the form of wavefront gradient fields or wavefront error function values ... 15
5.2.1 Gradient values ... 15
5.2.2 Wavefront error values ... 16
5.3 Gradient fit error ... 16
6 Presentation of data representing the aberrations of the human eye ... 16
6.1 General ... 16
6.2 Aberration data presented in the form of normalized Zernike coefficients ... 17
6.2.1 Aperture information ... 17
6.2.2 Units ... 17
6.2.3 Ordering of terms ... 17
6.2.4 Form of presentation ... 17
6.3 Aberration data presented in the form of normalized Zernike coefficients given in magnitude/axis form ... 17
6.3.1 Aperture information ... 17
6.3.2 Units ... 18
6.3.3 Ordering of terms ... 18
6.3.4 Tabular form of presentation ... 18
6.4 Aberration data presented in the form of topographical maps ... 18
6.4.1 General ... 18
6.4.2 Display contents ... 18

6.4.3 Standardized scales 19
6.4.4 Colour palette 19
6.5 Presentation of pooled aberration data 20
6.5.1 General 20
6.5.2 Analysis and presentation of pooled aberration results based on Zernike coefficient sets 20
6.5.3 Analysis and presentation of pooled aberration data where both right and left eye data are used 20

Annex A (informative) Methods of generating Zernike coefficients 21

Annex B (informative) Conversion of Zernike coefficients to account for differing aperture sizes, decentration and coordinate system rotation 23
B.1 General 23
B.2 Conversion of Zernike coefficients to account for differing aperture sizes 23
B.3 Conversion of Zernike coefficients to account for decentration of the coordinate origin 25
B.4 Conversion of Zernike coefficients to account for coordinate system rotation 29

Annex C (informative) Conversion between Zernike coefficients represented in different systems of notation 31
C.1 General 31
C.2 Conversion between a Malacara/Born and Wolf coefficient set and an ISO 24157 coefficient set 32

Annex D (informative) Computer algorithm to generate partial derivative weighting matrices for un-normalized Zernike polynomial functions 33

Annex E (informative) Table of normalized Zernike polynomial functions (to 6th radial order) 35

Bibliography 37
