ISO 8600-5:2020 (E)

Optics and photonics — Medical endoscopes and endotherapy devices — Part 5: Determination of optical resolution of rigid endoscopes with optics

Contents

Foreword

1 Scope

2 Normative references

3 Terms and definitions

4 Test method

4.1 General
4.2 Apparatus

5 Test report

Annex A (informative) Measurement procedure for Characteristic A, limiting resolution

Annex B (informative) Measurement procedure for Characteristic B, Contrast Transfer Function

Annex C (informative) Measurement procedure for Characteristic C, Modulation Transfer Function

Annex D (normative) Contrast transfer function (CTF) and modulation transfer function (MTF)

D.1 Introduction to CTF and its application to endoscope measurement
D.1.1 Conditions for the application of CTF to endoscope measurement
D.2 Introduction to MTF and its application to endoscope measurement
D.2.1 Summary of ISO 12233 (SFR)
D.2.2 Summary of ISO 15529 (MTF)
D.2.3 Application of ISO 12233 or ISO 15529 to endoscopes
D.3 Endoscope optical cutoff frequency limitation
D.4 Camera and coupling optics requirements
D.5 Target requirements

Annex E (informative) Conversion of spatial frequencies

Annex F (informative) Example of relay optics

Annex G (informative) Measurement frequency
