ISO/TS 24560-1:2022-07 (E)

Tissue-engineered medical products - MRI evaluation of cartilage - Part 1: Clinical evaluation of regenerative knee articular cartilage using delayed gadolimium-enhanced MRI of cartilage (dGEMRIC) and T2 mapping

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Principles 3

5 T2 mapping evaluation in human knee articular cartilage 4
5.1 Characterization parameters and methods 4
5.2 T2 value measurement process 6
5.2.1 Post-processing of imaging 6
5.2.2 Measurement method 6
5.2.3 ROIs of regenerative cartilage 7
5.2.4 ROIs of normal control cartilage 8
5.3 T2 value evaluation 8
5.3.1 Purpose of evaluation 8
5.3.2 In vivo evaluation of regenerative cartilage with T2 value 8

6 dGEMRIC evaluation in human knee articular cartilage 9
6.1 Characterization parameters and methods 9
6.2 T1 value measurement process 11
6.2.1 Post-processing of imaging 11
6.2.2 Measurement method 11
6.2.3 ROIs of regenerative cartilage 12
6.2.4 ROIs of normal control cartilage 12
6.3 R1 value calculation 12
6.4 R1 value evaluation 12
6.4.1 Purpose of evaluation 12
6.4.2 In vivo evaluation of regenerative cartilage with R1 values 13

7 Acceptable standard for MR evaluation 14
7.1 Requirements for MR equipment 14
7.2 Requirements for MR parameters 14
7.3 Requirements for the MR longitudinally evaluation 14
7.4 Exclusion criteria 14

8 Limitation 15

Annex A (informative) Example of measurement results 16

Annex B (informative)IntroductionofT1MRImagingtechnology 26
