Foreword iv

Introduction v

1 Scope 1

2 Second-order laser beam characterization 1
2.1 General 1
2.2 Wigner distribution 1
2.3 First- and second-order moments of Wigner distribution 2
2.4 Beam matrix 3
2.5 Propagation though aberration-free optical systems 4
2.6 Relation between second-order moments and physical beam quantities 4
2.7 Propagation invariants 8
2.8 Geometrical classification 9
2.9 Intrinsic classification 9

3 Background and offset correction 10
3.1 General 10
3.2 Coarse correction by background map subtraction 10
3.3 Coarse correction by average background subtraction 11
3.4 Fine correction of baseline offset 11

4 Alternative methods for beam width measurements 13
4.1 General 13
4.2 Variable aperture method 14
4.3 Moving knife-edge method 16
4.4 Moving slit method 17

Annex A (informative) Optical system matrices 20
