Optics and photonics - Interferometric measurement of optical elements and optical systems - Part 2: Measurement and evaluation techniques

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Measurement objects	1
2.1	Surfaces	1
2.2	Optical components in transmission	2
2.3	Optical systems	3
2.4	Indirect examination of the function of optical elements	3
3	Hardware aspects of an interferometer and test environment	4
3.1	General	4
3.2	Construction principles and influences on the quality of measurements	5
3.3	Test environment	15
4	Methods for evaluating the optical path difference	18
4.1	General	18
4.2	Visual inspection of interferograms	18
4.3	Manual evaluation of interferograms	24
4.4	Phase measurements with temporal carrier	26
4.5	Phase measurements with spatial carrier	32
4.6	Removal of phase ambiguities (phase unwrapping)	34
4.7	Registration of wavefronts; coordinate systems, coordinate system definition	35
4.8	Polynomial and other representations of wavefronts	36
5	Test reports and calibration certificates	38
5.1	General	38
5.2	Content of test reports and calibration certificates	39
5.3	Test reports	39
5.4	Calibration certificates	39
5.5	Opinions and interpretations	40
5.6	Electronic transmission of results	40
5.7	Format of reports and certificates	40
5.8	Amendments to test reports and calibration certificates	41
6	Data format	41
Annex A (informative)	Orthogonal polynomials	42
Annex B (informative)	Orthogonal functions on "unusual areas"	56
Bibliography		59
