ISO 22734-1:2008-07 (E)

Hydrogen generators using water electrolysis process - Part 1: Industrial and commercial applications

Contents

Page

Foreword vi

0 Introduction vii
0.1 Electrolysis Technology vii

1 Scope 1

2 Normative references 1

3 Terms and definitions 5

4 Operating conditions and specifications 7
4.1 Energy consumption 7
4.1.1 Electrical 7
4.1.2 Other utilities 7
4.2 Feed water specifications 8
4.3 Ambient environment 8
4.4 Purge gas 8
4.5 Oxygen storage/venting 8
4.6 Delivery of hydrogen 8
4.7 Delivery of oxygen 8

5 Mechanical equipment 8
5.1 General requirements 8
5.2 General materials requirements 9
5.3 Enclosures 10
5.3.1 Minimum strength 10
5.3.2 Environmental tolerance 10
5.3.3 Fire resistance 10
5.3.4 Insulating materials 10
5.3.5 Access panels 10
5.3.6 Ventilation openings 11
5.3.7 Containment of hazardous liquid leakage 11
5.4 Pressure bearing components 11
5.4.1 General requirements 11
5.4.2 Built-in storage of hydrogen and oxygen 11
5.4.3 Cell stacks 12
5.4.4 Process vessels 12
5.4.5 Piping, fittings and joints 12
5.4.6 Compressors 13
5.4.7 Pressure relief devices 13
5.4.8 Pressure regulators 13
5.4.9 Shut-off valves 13
5.5 Electric heaters 14
5.6 Pumps 14
5.7 Fans and ventilators 14
5.8 Heat transfer system 14
5.9 Connection to potable water 14

6 Electrical equipment, wiring and ventilation 14
6.1 Fire and explosion hazard protection requirements 14

6.1.1 General requirements 14
6.1.2 Area classification for hydrogen generators 14
6.1.3 Protection requirements for equipment within classified areas 14
6.1.4 Protection methods to prevent the accumulation of ignitable mixtures 15
6.1.5 Additional protection measures for hydrogen generators where oxygen is purposely vented inside the hydrogen generator enclosure 15
6.1.6 Ventilation 16
6.1.7 Start-up purge 16
6.1.8 Ventilation of adjacent compartments 16
6.1.9 Hydrogen gas detection system 16
6.1.10 Hydrogen generators designed to be installed in classified areas 16
6.2 Electrical equipment 18
6.2.1 General requirements 18
6.2.2 Grounding and bonding 18
6.2.3 Circuit protection 18
6.2.4 Safety control circuit 18

7 Control systems 19
7.1 General 19
7.2 Operator Controls 20
7.2.1 Start 20
7.2.2 Stop 20
7.2.3 Reset 20
7.2.4 Emergency stop 20
7.2.5 Suspension of safeguards 20
7.3 Control function in the event of failure 20
7.4 Programmable electronic equipment 20
7.5 Correctable conditions 20
7.6 Interconnected installations 21
7.7 Safety components 21
7.8 Remote control systems 21
7.9 Alarms 21

8 Ion transport medium 21
8.1 Electrolyte 21
8.2 Membrane 22

9 Protection of service personnel 22

10 Test methods 23
10.1 Type (Qualification) tests 23
10.1.1 General requirements 23
10.1.2 Basic test arrangements 23
10.1.3 Reference test conditions 23
10.1.4 Electrical tests 25
10.1.5 Pressure tests 27
10.1.6 Dilution tests 28
10.1.7 Protection against the spread of fire tests 29
10.1.8 Temperature tests 29
10.1.9 Environmental tests 29
10.1.10 Performance tests 29
10.2 Routine tests 30
10.2.1 General requirements 30
10.2.2 Continuity of the protective bonding circuit test 30
10.2.3 Voltage test 30
10.2.4 Functional tests 30
10.2.5 Leakage test 30
11 Marking and labelling 30
11.1 General requirements 30
11.2 Hydrogen generator marking 30
11.3 Marking of components 31
11.4 Warning signs 31

11.5 Additional requirements for hydrogen generators containing classified areas and for hydrogen generators designed to be used in classified areas 31
11.6 Additional requirements for oxygen venting 31
12 Documentation accompanying the hydrogen generator 31
12.1 Instructions and diagrams contained in the hydrogen generator 31
12.2 Handling and lifting instructions 31
12.3 Operation manual 32
12.4 Electrical diagrams 32
12.5 Installation instructions 33
12.6 Maintenance instructions 33

Annex A (informative) Hydrogen assisted corrosion 35

Annex B (informative) Conventional Container Terminology 36

Annex C (informative) Flammability limits of hydrogen 37

Bibliography 38
