DIN EN 12007-5:2014-07 (E)

Gas infrastructure - Pipelines for maximium operating pressure up to and including 16 bar - Part 5: Service lines - Specific functional requirements

Contents

Page

Introduction 5

1 Scope 6

2 Normative references 7

3 Terms and definitions 8
3.1 General terminology 8
3.2 Pressure related terminology 10

4 Design 10
4.1 General 10
4.2 Protection 11
4.3 Materials and components 12
4.3.1 General 12
4.3.2 Isolation valve 12
4.3.3 Flow limiting device 13
4.3.4 Venting devices 13
4.3.5 Regulators and meters 13
4.4 Service line routing 13
4.4.1 External routing 13
4.4.2 Wall and floor transition 13
4.4.3 Internal routing 14
4.5 Pipe sizing 15
4.6 Identification 15

5 Construction 15
5.1 General 15
5.2 Storage, handling and transportation 16
5.3 Service line installation 16
5.4 Connections to existing gas infrastructure 17

6 Quality control 17
6.1 Quality management system 17
6.2 Inspection prior to installation 17
6.3 Inspection during installation 17
6.3.1 Ground conditions 17
6.3.2 Joint integrity 18
6.4 Competence 18

7 Pressure testing 18
7.1 General 18
7.2 Safety during pressure testing 19
7.3 Prior to testing 19
7.4 Test mediums 19
7.5 Measurement equipment 19
7.6 Strength test 19
7.7 Tightness test 20
7.8 Failed pressure test 20

8 Commissioning and decommissioning 21

8.1 General 21
8.2 Purging 21

Foreword 4

9.2 Record system and traceability 22

Annex A (normative) Jointing methods 23

A.1 General 23
A.2 Threaded joints 23
A.3 Fusion, welded, brazed and soldered joints 23
A.4 Mechanical joints 23
A.5 Pressed joints 23
A.5.1 General 23
A.5.2 Pressed joints for copper pipe 24

Bibliography 25

9 Operation and maintenance 21
9.1 General 21
