

DIN 30350:2023-10 (E)

Interference of buried pipelines by buried high voltage transmission cables - Measures and minimum distances

Contents

Page

Foreword	3
Introduction	5
1 Scope	7
2 Normative references	7
3 Terms and definitions.....	8
4 Principles and structure of buried cable systems for the transmission of electrical energy	8
4.1 General	8
4.2 Earthing of cable sleeves.....	9
4.3 Cable distances.....	10
4.4 High-voltage three-phase AC transmission (HVAC)	10
4.5 High-voltage direct current transmission (HVDC)	11
5 Electrical and electromagnetic interferences with metal pipelines.....	12
6 Thermal interferences.....	13
6.1 General	13
6.2 General conditions for temperature field calculation.....	13
6.3 Conclusions	14
7 Structural interferences.....	15
7.1 General	15
7.2 Crossings.....	15
7.3 Parallel routing.....	17
8 Minimum distances	17
8.1 Parallel routing.....	17
8.2 Crossings.....	17
Bibliography	19

Figures

Figure 1 — Example of the arrangement of components for one phase or one pole	9
Figure 2 — Example of earthed cable sleeves.....	10
Figure 3 — Example of a high-voltage three-phase AC cable trench in cross section.....	11
Figure 4 — Example of a high-voltage direct current cable trench in cross section without DMR	12

Tables

Table 1 — Example of undisturbed soil temperatures as a function of depth for the design of buried cables.....	14
