Foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Types of syringe 7

5 Freedom from extraneous matter 7

6 Limits for extraneous matter 7

7 Lubrication of syringes and needles 8

8 Range of sizes 8

9 Graduated scale 8

10 Barrel 9

11 Piston/plunger assembly 9

12 Nozzle 10

13 Needle tubing and needles 10

14 Performance of assembled syringe 10

15 Packaging 11

16 Marking 12

Annex A (normative) Fluid for determination of acidity/alkalinity and extractable metals 15

Annex B (normative) Test method for air leakage past syringe piston during aspiration 16

Annex C (normative) Test method for force required to operate plunger 18

Annex D (normative) Properties of needles and needle tubing 19

Annex E (normative) Test method for determination of dead space 21

Annex F (normative) Test method for liquid leakage at syringe piston and syringe nozzle/hub or needle/barrel unions during compression 22

Annex G (normative) Test method for air leakage past nozzle/hub or needle/barrel unions during aspiration 24

Annex H (informative) Preparation of extract for test for pyrogenicity and toxicity 25

Annex I (informative) Symbol for "do not re-use" 26
