ISO 80369-7:2016-10 (E)

Small-bore connectors for liquids and gases in healthcare applicatio ns - Part 7: Connectors for intravascular or hypodermic applications

Contents

Page

Foreword iv

Introduction vi

1 * Scope 1

2 Normative references 1

3 Termsanddefinitions 2

4 General requirements 3
4.1 General requirements for luer connectors 3
4.2 Material used for luer connectors 4
4.3 Type tests 4

5 * Dimensional requirements for luerconnectors 4

6 Performance requirements 4
6.1 Fluid leakage 4
6.1.1 Fluid leakage requirement 4
6.1.2 Leakage by pressure decay 4
6.1.3 Positive pressure liquid leakage 4
6.2 Sub-atmospheric pressure air leakage 5
6.3 Stress cracking 5
6.4 Resistance to separation from axial load 5
6.5 Resistance to separation from unscrewing 5
6.6 Resistance to overriding 5

Annex A (informative) Rationale and guidance 6

Annex B (normative) luerconnectors 10

Annex C (normative) Reference connectors 21

Annex D (informative) Assessment of medicaldevices and their attributes with connections within this application 28

Annex E (informative) Summary of the usability requirements for luerconnectorsfor intravascular or hypodermic applications 30

Annex F (informative) Summary of luerconnector design requirements for intravascular or hypodermic applications 34

Annex G (informative) Summary of assessment of the design of the luerconnectorfor intravascular or hypodermic applications 37

Annex H (informative) Reference to the essential principles 40

Annex I (informative)Terminology--Alphabetizedindexofdefinedterms 41

Bibliography 42
