# DIN EN ISO 20186-2:2019-08 (E)

## Molecular in vitro diagnostic examinations - Specifications for pre-examination pro cesses for venous whole blood - Part 2: Isolated genomic DNA (ISO 20186-2:2019)

## Contents

Page

European foreword ....3

Foreword ....4

Introduction ....5

1 Scope ....6

2 Normative references ....6

3 Terms and definitions ....6

4 General considerations ....10

5 Outside the laboratory ....11
5.1 Specimen collection ....11
5.1.1 Information about the specimen donor/patient ....11
5.1.2 Selection of the venous whole blood collection tube by the laboratory ....11
5.1.3 Venous whole blood specimen collection from the donor/patient and stabilization procedures ....11
5.1.4 Information about the specimen and storage requirements at the blood collection facility ....12
5.2 Transport requirements ....13

6 Inside the laboratory ....13
6.1 Specimen reception ....13
6.2 Storage requirements ....13
6.3 Isolation of the genomic DNA ....15
6.3.1 General ....15
6.3.2 Examination provider's instructions available ....15
6.3.3 Examination provider's instructions not available ....15
6.4 Quantity and quality assessment of isolated genomic DNA ....16
6.5 Storage of isolated genomic DNA ....16
6.5.1 General ....16
6.5.2 Genomic DNA isolated with commercially available kits ....16
6.5.3 Genomic DNA isolated with the laboratory's own protocols ....17

Annex A (informative) Impact of pre-examination process steps on venous whole blood genomic DNA quality ....18

A.1 General information on operated experiments ....18
A.2 Influence of pre-examination variables (blood storage duration and temperature, and DNA isolation methods) on genomic DNA integrity ....18
A.3 Influence of genomic DNA integrity on an examination based on long PCR amplicons ....19
A.4 Influence of blood storage time on the genomic DNA integrity ....20
A.5 Influence of blood storage conditions on the performance of PCR tests based on short amplicons ....21

Bibliography ....24
