ISO 18250-7:2018-12 (E)

Medical devices - Connectors for reservoir delivery systems for healthcare applications - Part 7: Connectors for intravascular infusion

Contents

Page

Foreword iv

Introduction vi

1 *Scope 1

2 Normative references 1

3 Termsanddefinitions 2

4 General requirements 2
4.1 Non-interconnectability through conformance to this document 2
4.2 * Intravascular Reservoir Connector types 2

5 Material requirements 3
5.1 Connector Type 1: spikes and administration ports 3
5.2 Connector Type 2: Luers 3

6 Dimensional requirements 3
6.1 Connector Type 1: Spikes and Administration Ports 3
6.2 Connector Type 2: Luers 3

7 Performance requirements 3
7.1 * Connector Type 1: Spikes and Administration Ports 3
7.2 Connector Type 2: Luers 3

Annex A (informative) Rationale and guidance 4

Annex B (normative) Design of connectors* 13

Annex C (informative) Assessment of reservoirconnectors and their attributes with connections to medical devices within this intravascular application 15

Annex D (informative) Summary of usability and requirements for connectors for intravascular reservoirs 16

Annex E (informative) Summary of reservoirconnector design requirements for intravascularinfusion 19

Annex F (informative) Summary of engineering analysis and residual misconnections for connectors for intravascular reservoirs 24

Annex G (informative) Alternative spikes 30
