ISO 23500-1:2019 (E)

Preparation and quality management of fluids for haemodialysis and related therapies — Part 1: General requirements

Contents

Foreword

Introduction

1 Scope

1.1 General
1.2 Inclusions
1.3 Exclusions

2 Normative references

3 Terms and definitions

4 Quality requirements

4.1 General
4.2 Dialysis water
4.2.1 General
4.2.2 Chemical contaminants in dialysis water
4.2.3 Organic Carbon, pesticides and other chemicals
4.2.4 Microbiological contaminants in dialysis water
4.3 Requirements for concentrate
4.3.1 Chemical and microbiological contaminants in concentrate
4.3.2 Water used to prepare concentrate
4.4 Requirements for dialysis fluid
4.4.1 General
4.4.2 Microbiological requirements for standard dialysis fluid
4.4.3 Microbiological requirements for ultrapure dialysis fluid
4.4.4 Microbiological requirements for online-prepared substitution fluid
4.5 Record retention

5 Critical aspects of system design

5.1 General
5.2 Technical aspects
5.3 Microbiological aspects
5.4 Environmental impact

6 Validation of system performance

6.1 General
6.2 Validation plan
6.3 Installation and operational qualification
6.4 Performance qualification
6.5 Routine surveillance and revalidation

7 Quality management

7.1 General
7.2 Surveillance of fluid quality
7.2.1 Surveillance of dialysis water quality
7.2.2 Surveillance of concentrate quality
7.2.3 Surveillance of dialysis fluid quality
7.3 Surveillance of water treatment equipment
7.3.1 General
7.3.2 Surveillance of sediment filters
7.3.3 Surveillance of cartridge filters

7.3.4 Surveillance of softeners
7.3.5 Surveillance of carbon media
7.3.6 Surveillance of chemical injection systems
7.3.7 Surveillance of reverse osmosis
7.3.8 Surveillance of deionization
7.3.9 Surveillance of endotoxin-retentive filters
7.4 Surveillance of dialysis water storage and distribution
7.4.1 Surveillance of water storage tanks
7.4.2 Surveillance of the water distribution systems
7.4.3 Surveillance of bacterial control devices
7.4.3.1 Surveillance of ultraviolet irradiators
7.4.3.2 Surveillance of ozone generators
7.4.3.3 Surveillance of hot water disinfection systems
7.5 Surveillance of concentrate preparation
7.5.1 Surveillance of mixing systems
7.5.2 Surveillance of additives
7.6 Surveillance of concentrate distribution
7.7 Surveillance of dialysis fluid proportioning

8 Strategies for microbiological control

8.1 General
8.2 Disinfection
8.2.1 General
8.2.2 Microbiological aspects of fluid system design
8.2.3 Disinfection frequency
8.2.3.1 General
8.2.3.2 Dialysis water storage and distribution systems
8.2.3.3 Concentrate mixing systems
8.2.3.4 Concentrate distribution systems
8.3 Microbiological surveillance methods
8.3.1 General
8.3.2 Sample collection
8.3.2.1 Dialysis water sample sites
8.3.2.2 Dialysis fluid samples
8.3.3 Heterotrophic plate count
8.3.3.1 Storage of samples
8.3.3.2 Analytical methods
8.3.3.2.1 Membrane filtration
8.3.3.2.2 Spread-plate technique
8.3.3.2.3 Pour-plate technique
8.3.3.2.4 Dip samplers
8.3.3.3 Cultivation methods and conditions
8.3.4 Bacterial endotoxin test
8.3.5 Determination of yeast and mould

9 Location of and access to the water treatment system

10 Personnel

Annex A (informative) Rationale for the development and provisions of this document

A.1 Scope
A.2 Chemical contaminants
A.3 Microbiological contaminants
A.4 Requirements for concentrate
A.5 Microbiological contaminants in dialysis fluid
A.6 Surveillance of carbon media
A.7 Strategies for microbiological control
A.8 Heterotrophic plate count
A.9 Cultivation conditions
A.10 Bacterial endotoxin test

Annex B (informative) Equipment

B.1 General
B.2 Water treatment systems

B.2.1 General
B.2.2 Sediment filters
B.2.3 Cartridge filters
B.2.4 Softeners
B.2.5 Carbon media
B.2.6 Chemical injection systems
B.2.7 Reverse osmosis
B.2.8 Deionization
B.2.9 Endotoxin-retentive filters
B.3 Dialysis Water storage and distribution
B.3.1 General
B.3.2 Water storage
B.3.3 Water distribution
B.3.4 Bacterial control devices
B.3.4.1 General
B.3.4.2 Ultraviolet irradiators
B.3.4.3 Ozone disinfection systems
B.3.4.4 Hot water disinfection systems
B.4 Concentrate preparation
B.4.1 General
B.4.2 Materials compatibility
B.4.3 Labelling
B.4.3.1 General
B.4.3.2 Mixing tanks
B.4.3.3 Bulk storage/dispensing tanks
B.4.3.4 Concentrate containers
B.4.4 Concentrate mixing systems
B.4.4.1 General
B.4.4.2 Acid concentrate mixing systems
B.4.4.3 Bicarbonate concentrate mixing systems
B.4.5 Additives
B.5 Concentrate storage and distribution
B.5.1 Materials compatibility
B.5.2 Bulk storage tanks (acid concentrate)
B.5.3 Distribution systems
B.5.3.1 Acid concentrate distribution systems
B.5.3.2 Bicarbonate concentrate distribution systems
B.5.3.3 Concentrate outlets
B.6 Dialysis fluid proportioning
B.7 Central dialysis fluid storage and delivery systems
B.7.1 General
B.7.2 Design and maintenance
B.7.3 Dialysis fluid storage
B.7.4 Materials compatibility

Annex C (informative) Surveillance guidelines for water treatment equipment, distribution systems, and dialysis fluid

C.1 Surveillance systems
C.2 Cleaning/disinfection strategies

Annex D (informative) Strategies for microbiological control

D.1 General
D.2 Microbial surveillance methods
D.2.1 General
D.2.2 Sample collection
D.2.3 Heterotrophic plate count
D.2.4 Endotoxin test
D.3 Interpreting the results of microbial surveillance

Annex E (informative) Validation

E.1 General and background
E.2 Validation programme
E.2.1 General
E.2.2 Validation steps

E.2.3 Validation plan
E.2.4 Performance qualification
E.3 Consequences for the surveillance strategy

Annex F (informative) Special considerations for home haemodialysis

F.1 General
F.2 Fluid quality
F.3 Utilities
F.3.1 Water supply
F.3.2 Drain
F.3.3 Electrical wiring and power supply
F.4 Environment
F.5 Equipment
F.5.1 General
F.5.2 Softener
F.5.3 Carbon media
F.5.4 Reverse osmosis
F.5.5 Deionization
F.5.6 Dialysis water distribution
F.5.7 Backflow prevention
F.5.8 Electrical safety
F.6 Concentrate
F.6.1 Bicarbonate concentrate
F.6.2 Acid concentrate
F.7 Surveillance
F.7.1 Dialysis water and dialysis fluid quality
F.7.2 Equipment
F.7.2.1 General
F.7.2.2 Cartridge filter
F.7.2.3 Softener
F.7.2.4 Carbon media
F.7.2.5 Reverse osmosis
F.8 Personnel

Annex G (informative) Special considerations for acute haemodialysis

G.1 General
G.2 Fluid quality
G.3 Equipment
G.3.1 General
G.3.2 Backflow prevention
G.3.3 Electrical safety
G.3.4 Carbon media
G.3.5 Ion exchange
G.3.5.1 Deionization
G.3.5.2 Softeners
G.3.6 Reverse osmosis
G.3.7 Endotoxin-retentive filters
G.4 Microbial control strategies
